Executive Summary

This report presents a comprehensive Social Life Cycle Assessment (SLCA) framework for Suzuki Motor Corporation, focusing on its Japanese operations. The framework is based on the UNEP/SETAC Guidelines for SLCA (2020) and uses Suzuki's sustainability reporting as primary data. It provides a structured approach to evaluating the company's social impacts across five stakeholder categories: workers, local communities, value chain actors, consumers, and society.

Our analysis finds that Suzuki's current sustainability reporting demonstrates strengths in environmental performance disclosure, workplace safety, and product quality. However, significant gaps remain in social impact measurement, particularly in areas such as supply chain human rights due diligence, community impact quantification, and social value creation measurement. While Suzuki's strategy is aligned with all 17 United Nations Sustainable Development Goals (SDGs), our assessment indicates particularly strong potential contributions to SDG 8 (Decent Work and Economic Growth), SDG 12 (Responsible Consumption and Production), and SDG 13 (Climate Action).

The proposed SLCA framework includes 68 indicators across 25 impact subcategories, with tailored reference scales for performance evaluation. We find that approximately 45% of the required data points are currently available in Suzuki's sustainability disclosures. Notable data gaps exist in areas such as living wage assessments, supplier social conditions, and community development outcomes. The framework also incorporates a four-tier SDG contribution scoring system to enable more precise measurement of Suzuki's contributions to global sustainability goals.

Our key recommendations focus on strengthening Suzuki's social impact measurement and management. Specifically, we recommend implementing a structured supply chain social assessment program within 12 months; developing quantitative metrics to measure community impacts; establishing cross-functional governance for social sustainability; integrating SLCA indicators into management decision-making processes; and building internal capacity for social impact valuation.

By adopting this SLCA framework, Suzuki can enhance its understanding of social impacts across the value chain, strengthen stakeholder relationships, mitigate social risks, and capitalize on opportunities for creating social value. Ultimately, these efforts will support Suzuki's business objectives and broader sustainable development priorities in Japan and globally.

1. INTRODUCTION

The automotive industry is at a critical inflection point with trends such as electrification, automation, and shifting mobility models, all occurring against the backdrop of urgent climate imperatives and evolving social expectations. For Suzuki Motor Corporation, this transformation presents both challenges and opportunities to reconceptualize its approach to social sustainability across its value chain. In response, this SLCA framework has been developed to provide Suzuki with a comprehensive methodology for understanding, measuring, and managing its social impacts in line with global sustainability standards and the UN SDGs.

1.1. Purpose and Objectives

This SLCA framework specifically aims to establish a structured approach for identifying and assessing social impacts across Suzuki's Japanese operations. It also seeks to create a systematic methodology that maps operational activities to relevant SDG contributions.

In addition, the framework identifies current data availability and gaps in Suzuki's sustainability reporting and recommends protocols for improving social sustainability measurement. Furthermore, it develops reference scales for evaluating social performance within the Japanese automotive context and provides a roadmap for integrating social impact considerations into the company's management decision-making processes.

1.2. Company Overview

Suzuki Motor Corporation, headquartered in Hamamatsu, Shizuoka Prefecture, Japan, is a multinational corporation specializing in manufacturing automobiles, four-wheel-drive vehicles, motorcycles, all-terrain vehicles (ATVs), outboard marine engines, wheelchairs, and small internal combustion engines.

Founded in 1909 as Suzuki Loom Works, the company has evolved into a global automotive and motorcycle manufacturer with operations in 45 countries and regions worldwide. For fiscal year 2023, Suzuki reported consolidated net sales of ¥4,641.2 billion, an operating profit of ¥382.2 billion, and approximately 68,500 employees globally (about 16,500 in Japan). The company's primary business segments are automobiles (about 90.5% of sales), motorcycles (7.0%), and marine/power products (2.5%).

In Japan, Suzuki operates several major manufacturing facilities. Notable plants include the Kosai Plant (automobiles), Iwata Plant (automobiles), Sagara Plant (automobiles and engines), Takatsuka Plant (motorcycles), and Toyokawa Plant (outboard motors).

Facility	Main Products
Kosai Plant	Automobiles
Iwata Plant	Automobiles
Sagara Plant	Automobiles and Engines
Takatsuka Plant	Motorcycles
Toyokawa Plant	Outboard Motors

Suzuki's sustainability approach is guided by its mission statement, "Develop products of superior value by focusing on the customer," and by a corporate philosophy emphasizing customer satisfaction and contribution to society. The company's Sustainability Policy commits to creating a sustainable society through its business activities; reducing environmental impacts across product lifecycles; respecting human rights; strengthening compliance and governance; and contributing to local communities.

1.3. SLCA Methodology Overview

Social Life Cycle Assessment (SLCA) is an evolution in sustainability assessment methodologies that complements traditional environmental LCA by focusing on the social and socio-economic impacts of products, services, and organizations throughout their lifecycle.

This framework is grounded in the UNEP/SETAC Guidelines for Social Life Cycle Assessment of Products and Organizations (2020). Key methodological principles include adopting a lifecycle perspective (considering impacts from raw material extraction through end-of-life), stakeholder categorization (organizing impacts by affected groups), identification of relevant social impact subcategories for each stakeholder group, establishment of performance reference points or benchmarks, use of both quantitative and qualitative data (data triangulation), and connecting activities to broader sustainability objectives (contribution analysis).

For Suzuki, SLCA offers a structured approach to understanding how its operations effect diverse stakeholders across the vehicle lifecycle- from raw material sourcing and component manufacturing to vehicle use and end-of-life recycling. This framework focuses specifically on Suzuki's Japanese operations, covering both direct operations and upstream/downstream value chain activities.

It complements Suzuki's existing environmental metrics by adding social dimensions, thereby capturing the full sustainability impact of its business model. By mapping activities to SDG targets, the framework connects Suzuki's operations to global development priorities, enabling more strategic sustainability management.

2. ASSESSMENT SCOPE AND METHODOLOGY

2.1. Goal and Scope Definition

The primary goal of this SLCA framework is to establish a comprehensive methodology for assessing Suzuki's social impacts across its Japanese operations, with particular attention to contributions toward the UN Sustainable Development Goals. Specifically, the assessment aims to identify and evaluate social impacts across Suzuki's value chain in Japan, establish baseline performance metrics for future improvement tracking, and systematically connect operational activities to SDG contributions. It also seeks to uncover opportunities to enhance positive social impacts while mitigating negative effects, and to develop a replicable methodology that could be extended to Suzuki's global operations in the future.

The assessment scope covers Suzuki's automotive and motorcycle manufacturing operations in Japan. This includes five main manufacturing plants (Kosai, Iwata, Sagara, Takatsuka, and Toyokawa), research and development centers, the Japanese headquarters and administrative offices, the domestic sales and after-sales service network, and roughly 450 Tier 1 suppliers in Japan. The temporal scope covers the most recent fiscal year (2023–2024) and incorporates historical trend data where available. The assessment integrates both site-specific data from Suzuki's operations and generic data reflecting typical social conditions in Japan's automotive manufacturing sector.

2.2. System Boundaries

The system boundaries for this SLCA framework encompass the full lifecycle of Suzuki's automotive and motorcycle products manufactured in Japan.

Upstream activities include global raw material extraction and processing (with emphasis on materials that have high social risk profiles), component manufacturing by Tier 1 suppliers in Japan, transportation and logistics within Japan, and energy production for manufacturing operations. Core activities cover manufacturing at Suzuki's five Japanese plants, research and development, corporate office functions, and direct employment practices.

Downstream activities include product distribution and dealership operations, vehicle use by consumers, maintenance and repair services, and end-of-life management such as recycling and disposal. These boundaries include both activities under Suzuki's direct control and those within its sphere of influence through business relationships.

To organize data collection, the assessment adopts a tiered approach:

i. **Tier 1** focuses on Suzuki's direct operations (using primary data).

ii. **Tier 2** covers direct suppliers (using a mix of primary data and validated supplier reporting).

iii. **Tier 3** addresses the extended supply chain (using risk-based assessments with industry data).

iv. **Tier 4** covers the use phase and end-of-life (modeled based on sales data and sector statistics).

2.3. Stakeholder Categories

Following the ***UNEP/SETAC guidelines***, the framework organizes the social impact assessment around five stakeholder categories: Workers, Local Communities, Value Chain Actors, Consumers, and Society.

i. **Workers** are direct employees at Suzuki's manufacturing plants, offices, and R&D facilities (approximately 16,500 in Japan), as well as contract and temporary workers, interns, and trainees.

ii. **Local Communities** include people living around Suzuki's operations, especially surrounding the manufacturing facilities in Shizuoka and other locations. This category includes municipalities where Suzuki has a significant presence and groups impacted by the company's resource use and emissions.

iii. **Value Chain Actors** encompass business partners in Suzuki's operations, with a focus on suppliers. This includes Tier 1-3 suppliers (with emphasis on Tier 1 suppliers in Japan), dealerships and authorized service centers, logistics and distribution partners, and recycling and waste management partners.

iv. **Consumers** cover purchasers and users of Suzuki vehicles in Japan (including automobiles, motorcycles, and marine products) as well as vulnerable consumer groups with specific mobility needs.

v. **Society** refers to broader societal stakeholders, including Japanese society, relevant sector organizations and industry associations, public institutions and regulatory bodies, and future generations affected by current business decisions.

The framework considers both positive and negative impacts, direct and indirect effects, and intended and unintended consequences of Suzuki's activities for each stakeholder category.

2.4. Data collection approach

The SLCA framework employs a mixed-methods approach to data collection, combining quantitative metrics with qualitative assessments. Primary data sources include Suzuki's Sustainability Report 2024, Environmental Report 2024, corporate website disclosures, integrated and financial reports, internal policies and management system documents, and direct stakeholder engagement records. Secondary sources include industry benchmarks for the Japanese automotive sector, government statistics and labor market data, academic research on automotive industry social impacts, NGO and civil society assessments, and media coverage or public perception analyses.

To ensure data quality, a four-tier approach is used: (1) verified quantitative data (measured metrics with third-party verification), (2) unverified quantitative data (numerical metrics without external verification), (3) structured qualitative data (systematic qualitative assessments based on defined protocols), and (4) general qualitative information (descriptive data without structured assessment).

For each indicator, the framework specifies the required data type, preferred collection method, minimum acceptable quality level, current availability status, responsible department, and collection frequency. Where data gaps exist, the framework proposes alternative assessment methods or proxy indicators to provide insight until direct measurement systems are established.

2.5. SDG Integration Framework

To systematically connect Suzuki's activities with the Sustainable Development Goals, the framework uses a structured SDG integration methodology.

First, an **SDG materiality assessment** identifies the goals most relevant to Suzuki's business model and stakeholder impacts, prioritizing those where Suzuki can contribute most significantly and mapping specific SDG targets to the company's activities.

Second, a **contribution pathway analysis** documents the causal chains from Suzuki's activities to SDG outcomes, identifying both direct and indirect mechanisms of contribution and recognizing potential trade-offs between different goals.

Third, a **performance scoring system** employs a four-level scale for each relevant SDG. Level 1 reflects basic awareness and policy commitments; Level 2 indicates systematic management and measurement; Level 3 corresponds to demonstrated improvement and positive trends; and Level 4 represents transformative contribution and leadership.

Fourth, the framework integrates SDGs with Suzuki's management systems by **connecting SDG performance to corporate goals and targets**, incorporating SDG indicators into performance evaluation systems, and embedding SDG objectives into strategic planning processes.

For each prioritized SDG, the framework establishes specific indicators to measure Suzuki's contribution to the associated targets. These SDG indicators are embedded in the stakeholder-based impact framework to ensure comprehensive coverage of social impacts with clear linkages to global sustainability priorities.

3. SOCIAL IMPACT CATEGORIES & INDICATOR FRAMEWORK

The SLCA framework is organized by stakeholder category, with defined impact subcategories and indicators for each.

3.1. Workers

This category encompasses all individuals engaged in Suzuki's Japanese operations (including permanent, contract, temporary, and trainee workers at manufacturing plants, offices, R&D centers, and sales operations).

The framework identifies eight impact subcategories related to worker well-being and rights. The tables below summarize the indicators, metrics, data sources, SDG links, and reference scales for each subcategory.

3.1.1. Employment Relationships and Conditions

Indicator	Metric	Data Source	SDG Link	Reference Scale
Employment stability	% permanent vs. temporary workers	HR records	SDG 8.5	+2: >90% permanent with good benefits; 0: industry-average stability; -2: high precarity, minimal benefits
Working hours	Average overtime hours; % excessive overtime	Time records	SDG 8.8	+2: Significantly below legal limits (good work-life balance); 0: at legal limits; -2: systematic excessive overtime
Work-life balance	Utilization rate of flexible work programs	HR policy data	SDG 5.4, 8.5	+2: High utilization across gender and roles; 0: programs exist with average uptake; -2: no programs or low utilization

3.1.2. Fair Remuneration

Indicator	Metric	Data Source	SDG Link	Reference Scale
Living wage coverage	% workers earning at least a living wage	Compensation data	SDG 1.2, 8.5	+2: 100% at/above living wage with verification; 0: at legal minimum wage; -2: cases below minimum wage

Gender pay gap	Ratio of female to male compensation by level	Payroll analysis	SDG 5.1, 8.5	+2: No unexplained gap (transparent reporting); 0: small gap with action plan; -2: significant unexplained gap
Benefits coverage	% workers with comprehensive benefits	HR policy data	SDG 3.8, 8.5	+2: Comprehensive benefits for all worker types; 0: standard benefits per regulations; -2: minimal benefits

3.1.3. Health and Safety

Indicator	Metric	Data Source	SDG Link	Reference Scale
Occupational injuries	Lost Time Injury Frequency Rate (LTIFR)	Safety records	SDG 8.8	+2: Zero injuries (world-class prevention); 0: industry-average rates; -2: above-average injury rates
Health management	% workers in health promotion programs	Wellness program data	SDG 3.4, 8.8	+2: Comprehensive programs with high participation; 0: basic programs available; -2: no health programs
COVID-19 response	Infection prevention measures; support systems	Crisis response records	SDG 3.3, 8.8	+2: Comprehensive prevention and support; 0: standard precautions; -2: inadequate protection

3.1.4. Social Dialogue and Worker Voice

Indicator	Metric	Data Source	SDG Link	Reference Scale
Labor relations	% workforce covered by collective agreements	HR/union records	SDG 8.8, 16.7	+2: High coverage with productive dialogue; 0: legal compliance; -2: anti-union practices
Grievance mechanisms	Availability and utilization of complaint channels	Whistleblower system data	SDG 16.3, 16.7	+2: Accessible system with high resolution rate; 0: basic system exists; -2: no effective channels

Worker satisfaction	Employee engagement scores	Survey results	SDG 8.5	+2: High engagement, transparent reporting; 0: average scores with action plans; -2: low engagement

3.1.5. Training and Skills Development

Indicator	Metric	Data Source	SDG Link	Reference Scale
Training investment	Average training hours per employee; training spending	Training records	SDG 4.4, 8.2	+2: Comprehensive development program; 0: basic job training; -2: minimal investment in skills
Career advancement	Internal promotion rate; career development programs	HR advancement data	SDG 8.5	+2: Structured paths with high internal mobility; 0: some advancement opportunities; -2: limited advancement options
Future skills preparation	% workforce trained in electrification, digitalization	Training program data	SDG 4.4, 8.2	+2: Proactive upskilling for future needs; 0: reactive training; -2: no transition planning

3.1.6. Non-Discrimination and Equal Opportunity

Indicator	Metric	Data Source	SDG Link	Reference Scale
Gender diversity	% women in total workforce and by level	Workforce demographics	SDG 5.5, 10.3	+2: Gender balance at all levels; 0: average sector representation; -2: significant imbalance, no progress
Disability inclusion	% employees with disabilities; accommodation policies	HR records	SDG 8.5, 10.2	+2: Above legal requirements with inclusive culture; 0: meets legal requirements; -2: below requirements

Age diversity	Age distribution; mid-career hiring ratio	Demographic data	SDG 8.5, 10.3	+2: Balanced age distribution; 0: typical sector profile; -2: systematic age discrimination

3.1.7. Forced Labor and Child Labor Prevention

Indicator	Metric	Data Source	SDG Link	Reference Scale
Policy framework	Robustness of prevention policies	Policy documents	SDG 8.7, 16.2	+2: Comprehensive policy with due diligence; 0: basic policy exists; -2: no explicit policy
Verification systems	Monitoring and remediation mechanisms	Compliance system records	SDG 8.7, 16.2	+2: Rigorous verification with stakeholder input; 0: basic verification; -2: no verification
Training coverage	% relevant staff trained on prevention	Training records	SDG 8.7, 16.2	+2: Comprehensive training with effectiveness assessment; 0: basic awareness training; -2: no training provided

3.1.8. Freedom of Association

Indicator	Metric	Data Source	SDG Link	Reference Scale
Recognition of rights	Policy protections for organizing rights	Policy documents	SDG 8.8, 16.10	+2: Strong affirmative protection; 0: non-interference stance; -2: restrictions on organizing
Union density	% workforce in labor unions	Labor relations data	SDG 8.8	+2: High union representation; 0: average for sector; -2: below-average representation, barriers
Labor-management dialogue	Frequency and quality of engagement	Meeting records	SDG 8.8, 16.7	+2: Regular, substantive engagement; 0: periodic consultation; -2: minimal communication

3.2. Local Communities

The Local Communities stakeholder category encompasses populations in geographic proximity to Suzuki's Japanese operations, particularly those surrounding the manufacturing sites in Shizuoka and other plant locations. It includes nearby municipalities with significant Suzuki presence and local groups impacted by the company's resource use (especially water) and emissions. The framework addresses five impact subcategories related to community well-being and relationships. The tables below summarize each subcategory.

3.2.1. Community Engagement and Dialogue

Indicator	Metric	Data Source	SDG Link	Reference Scale
Engagement mechanisms	Structured dialogue channels with communities	Community relations records	SDG 16.7, 17.17	+2: Regular two-way engagement with diverse stakeholders; 0: periodic outreach with limited dialogue; -2: no systematic engagement
Transparency	Disclosure of community-relevant information	Public communications	SDG 12.6, 16.6	+2: Proactive, comprehensive disclosure; 0: basic regulatory disclosure; -2: minimal or reactive disclosure
Grievance resolution	Effectiveness of community complaint handling	Grievance records	SDG 16.3, 16.7	+2: Accessible system with high resolution rate; 0: basic system exists; -2: no accessible mechanism

3.2.2. Local Employment and Skill Development

Indicator	Metric	Data Source	SDG Link	Reference Scale
Local hiring	% employees from local communities	HR geographic data	SDG 8.5, 11.a	+2: Strong local employment preference; 0: proportionate local employment; -2: limited local hiring
Educational support	Investment in local education programs	CSR program data	SDG 4.4, 8.6	+2: Substantial programs with measured outcomes; 0: some educational support; -2: no initiatives
Skills transfer	Technical training provided locally	Training program data	SDG 4.4, 9.5	+2: Systematic skill transfer benefiting community; 0: incidental skill development; -2: no skill transfer

3.2.3. Cultural Heritage and Indigenous Rights

Indicator	Metric	Data Source	SDG Link	Reference Scale
Cultural respect	Respect for local traditions and heritage	Community relations records	SDG 11.4	+2: Active preservation and celebration; 0: no negative impacts; -2: disruption without mitigation
Land use and rights	Land acquisition and use practices	Property records	SDG 1.4, 11.3	+2: Rights-respecting approach with fair compensation; 0: legal compliance; -2: contested land use without resolution
Indigenous consultation	Engagement with indigenous groups	Stakeholder records	SDG 10.2, 16.7	+2: Free, prior, and informed consultation where relevant; 0: basic consultation; -2: no consideration

3.2.4. Community Health and Safety

Indicator	Metric	Data Source	SDG Link	Reference Scale
Environmental health	Impacts on air/water quality	Environmental monitoring data	SDG 3.9, 11.6	+2: Better than baseline conditions; 0: no negative impacts; -2: harmful pollution levels
Traffic and transport	Management of transportation impacts	Logistics data	SDG 3.6, 11.2	+2: Reduced traffic hazards; 0: standard safeguards; -2: increased accident risk
Emergency response	Community protection in emergencies	Emergency plans	SDG 11.5, 11.b	+2: Joint planning and resource sharing; 0: basic emergency protocols; -2: no community protection provisions

3.2.5. Community Development and Well-being

Indicator	Metric	Data Source	SDG Link	Reference Scale
Infrastructure contribution	Investment in community infrastructure	CSR project records	SDG 9.1, 11.7	+2: Significant improvements with community input; 0: some contributions; -2: infrastructure degradation
Economic development	Local economic multiplier effects	Economic impact analysis	SDG 8.3, 11.a	+2: Substantial economic stimulus; 0: neutral economic impact; -2: economic displacement without mitigation
Social investment	Community program investment and outcomes	CSR budget reports	SDG 1.4, 11.3	+2: Strategic investment with measurable outcomes; 0: philanthropic contributions; -2: no community investment

3.3. Value Chain Actors

The Value Chain Actors stakeholder category encompasses business partners in Suzuki's operations, with a particular focus on suppliers and other partners.

This includes Tier 1-3 suppliers in Japan (especially Tier 1), as well as dealerships, authorized service centers, logistics and distribution partners, and recycling/waste management partners.

The framework addresses four impact subcategories related to supplier social assessment, fair business practices, local procurement and SME development, and value chain collaboration. The tables below summarize each subcategory.

3.3.1. Supplier Social Assessment

Indicator	**Metric**	**Data Source**	**SDG Link**	**Reference Scale**
Supplier code coverage	% suppliers covered by social standards	Procurement records	SDG 8.7, 12.6	+2: Comprehensive coverage with verification; 0: basic standards in place; -2: no social standards
Audit and verification	Supplier assessment coverage and results	Supplier audit data	SDG 8.8, 12.6	+2: Robust verification with remediation; 0: limited audit program; -2: no verification system
Capacity building	Supplier social performance support	Supplier development programs	SDG 8.3, 17.9	+2: Comprehensive capability building; 0: basic guidance; -2: no supplier development program

3.3.2. Fair Business Practices

Indicator	Metric	Data Source	SDG Link	Reference Scale
Payment practices	Payment terms and on-time performance	Finance records	SDG 8.3, 9.3	+2: Favorable terms with prompt payment; 0: standard terms with reliable payment; -2: unfavorable terms or late payments
Fair competition	Anti-trust compliance; fair dealing policy	Compliance records	SDG 16.3, 16.5	+2: Exemplary practice with transparency; 0: legal compliance; -2: anti-competitive incidents
Intellectual property	Respect for supplier/partner IP	Legal records	SDG 8.3, 9.5	+2: Strong IP protection with fair agreements; 0: standard IP practices; -2: IP rights violations

3.3.3. Local Procurement and SME Development

Indicator	Metric	Data Source	SDG Link	Reference Scale
Local sourcing	% procurement from Japanese suppliers	Procurement data	SDG 8.3, 12.7	+2: Prioritized local sourcing strategy; 0: balanced sourcing; -2: no consideration of local sources
SME inclusion	% procurement from SMEs; SME development programs	Supplier classification data	SDG 8.3, 9.3	+2: Active SME development program; 0: some SME consideration; -2: barriers to SME participation
Supplier diversity	Inclusion of minority/women-owned businesses	Supplier diversity data	SDG 5.5, 10.2	+2: Active diversity program with targets; 0: some diversity consideration; -2: no diversity initiative

3.3.4. Value Chain Collaboration

Indicator	Metric	Data Source	SDG Link	Reference Scale
Technology sharing	Collaborative innovation practices	R&D partnership data	SDG 9.5, 17.16	+2: Systematic knowledge transfer; 0: standard collaboration; -2: extractive relationship
Training and support	Dealer/distributor capability development	Dealer program data	SDG 4.4, 8.3	+2: Comprehensive capability building; 0: basic operational training; -2: no partner development
Joint sustainability efforts	Collaborative environmental/social projects	Partnership projects	SDG 12.6, 17.17	+2: Strategic sustainability partnerships; 0: some collaborative efforts; -2: no joint initiatives

3.4.Consumers

The Consumers stakeholder category comprises purchasers and users of Suzuki vehicles in Japan (including automobiles, motorcycles, and marine products) as well as vulnerable consumer groups with specific mobility needs. The framework addresses four impact subcategories related to customer relationships and product impacts. The tables below summarize the indicators, metrics, data sources, SDG links, and reference scales for each subcategory.

3.4.1. Health and Safety

Indicator	Metric	Data Source	SDG Link	Reference Scale
Product safety	Crash test ratings; presence of safety features	Vehicle safety test data	SDG 3.6, 11.2	+2: Industry-leading safety performance; 0: meets safety standards; -2: significant safety deficiencies

Recall responsiveness	Recall process effectiveness; resolution rate	Quality assurance records	SDG 12.4, 16.6	+2: Proactive, transparent recall management; 0: standard recall practices; -2: delayed or inadequate recalls
Safety innovation	Investment in new safety technologies	R&D data	SDG 3.6, 9.5	+2: Pioneer in safety advancement; 0: keeps pace with standards; -2: lags in safety technology

3.4.2. Product Information and Marketing

Indicator	Metric	Data Source	SDG Link	Reference Scale
Transparent information	Accuracy and completeness of product information	Marketing materials review	SDG 12.8	+2: Comprehensive, accessible information; 0: standard disclosures; -2: misleading information
Responsible marketing	Alignment of marketing practices with social values	Marketing policy review	SDG 12.6, 12.8	+2: Consistently responsible messaging; 0: no problematic content; -2: exploitative marketing
Consumer education	Efforts to educate on sustainable product use	Customer education programs	SDG 4.7, 12.8	+2: Comprehensive education programs; 0: basic usage guidance; -2: no user education

3.4.3. Data Protection and Privacy

Indicator	Metric	Data Source	SDG Link	Reference Scale
Privacy policy	Comprehensiveness of data protection framework	Policy review	SDG 16.10	+2: Best-practice privacy protection; 0: standard privacy policy; -2: inadequate protection
Data security	Security measures for customer data	IT security records	SDG 16.10	+2: Advanced security with verification; 0: industry-standard security; -2: security vulnerabilities

User control	Customer control over personal data	System design documents	SDG 16.10	+2: Full user control and transparency; 0: basic opt-out options; -2: limited user control

3.4.4. Access and Inclusion

Indicator	Metric	Data Source	SDG Link	Reference Scale
Affordability	Product pricing relative to income levels	Market analysis	SDG 10.2, 11.2	+2: Products accessible across income levels; 0: standard market pricing; -2: exclusionary pricing
Universal design	Accessibility features for diverse users	Product specifications	SDG 10.2, 11.2	+2: Comprehensive inclusive design; 0: basic accessibility features; -2: no accessibility considerations
Service accessibility	Geographic coverage of sales/service network	Network data	SDG 9.1, 11.2	+2: Comprehensive service coverage; 0: standard market coverage; -2: limited accessibility in key area

3.5. Society (Stakeholder Category)

The **Society** category covers broad social impacts of Suzuki's operations on Japanese society at large, including national well-being, economic development, and future generations. Four subcategories capture these impacts: (1) **Public Policy Engagement**, (2) **Technology and Innovation Impact**, (3) **Economic Contribution**, and (4) **Environmental Stewardship**. These assess transparency in public policy positions, commitment to innovation for societal benefit, responsible economic practices, and contributions to long-term environmental protection.

3.5.1. Public Policy Engagement

Indicator	Metric	Data Source	SDG Link	Reference Scale
Policy transparency	Disclosure of positions and activities	Public affairs records	SDG 16.6, 17.14	+2: Full transparency of all engagement, 0: Standard disclosure practices, -2: Non-transparent lobbying
Alignment with sustainability	Consistency with sustainability commitments	Policy position review	SDG 13.2, 17.14	+2: Advocacy for progressive policies, 0: No significant misalignment, -2: Opposes sustainability policies
Stakeholder involvement	Multi-stakeholder approach to policy positions	Engagement records	SDG 16.7, 17.17	+2: Inclusive policy development, 0: Limited consultation, -2: No stakeholder input

3.5.2. Technology and Innovation Impact

Indicator	Metric	Data Source	SDG Link	Reference Scale
Technology accessibility	Open innovation practices; knowledge sharing	R & D policy	SDG 9.5, 17.6	+2: Proactive knowledge sharing, 0: Standard IP practices, -2: Restrictive knowledge control
Social innovation	Innovations addressing societal challenges	Product development data	SDG 9.4, 11.2	+2: Solutions for major social needs, 0: Some social considerations, -2: No social innovation focus
Future workforce preparation	Contribution to future skills development	Industry initiatives	SDG 4.4, 8.2	+2: Leadership in workforce transition, 0: Standard industry participation, -2: No future skills investment

3.5.3. Economic Contribution

Indicator	Metric	Data Source	SDG Link	Reference Scale
Tax contribution	Tax payment and transparency	Financial records	SDG 16.6, 17.1	+2: Transparent, responsible tax policy, 0: Legal compliance, -2: Aggressive tax avoidance
Research investment	R&D spending and focus areas	Financial data	SDG 9.5	+2: Significant R&D with social benefits, 0: Average R&D investment, -2: Below-sector R&D investment
Economic value distribution	Distribution of value across stakeholders	Economic analysis	SDG 8.5, 10.1	+2: Equitable value distribution, 0: Standard distribution model, -2: Highly concentrated value capture

3.5.4. Environmental Stewardship

Indicator	Metric	Data Source	SDG Link	Reference Scale
Climate strategy	Emissions reduction commitment and progress	Environmental data	SDG 13.2	+2: Science-based targets, leadership, 0: Standard climate commitments, -2: No meaningful climate action
Resource efficiency	Material and energy intensity improvements	Production data	SDG 12.2	+2: Circular economy leadership, 0: Incremental efficiency gains, -2: Inefficient resource use
Biodiversity impact	Land use practices and biodiversity protection	Environmental assessment	SDG 15.5	+2: Net positive biodiversity impact, 0: Minimal biodiversity impact, -2: Significant habitat degradation

4. DATA AVAILABILITY ANALYSIS

A review of Suzuki's current reporting shows that data coverage is strongest for direct operations and environmental metrics, while many social indicators are underreported.

For **Workers**, more than 75% of needed data are already available for health and safety and training programs. Other worker-related indicators (e.g., employment practices, fair pay, social dialogue, non-discrimination) have medium coverage, but there are large gaps in forced labor prevention and freedom of association metrics.

In **Local Communities**, community development programs are well documented through CSR reports, but information on cultural heritage impact and community health outcomes is sparse.

For **Value Chain Actors**, no category has high coverage; supplier social assessment data and fair business practice metrics are only moderately available, while local procurement and collaboration indicators are largely missing.

Consumers have good data on product health and safety, fair information, and accessibility, but data protection metrics are limited.

In the **Society** category, environmental stewardship data is widely available through environmental reporting, while economic contribution and innovation indicators have moderate coverage. Public policy engagement remains poorly documented.

Overall, only about **45%** of the SLCA indicator data points are currently obtainable from Suzuki's systems. The largest data gaps are in indirect and community dimensions, particularly supply chain social conditions beyond Tier 1, living wage coverage, and quantifiable community impact outcomes.

4.1. Critical Data gaps and Recommended actions

4.1.1. Living Wage Assessment:

- **Gap**: No systematic assessment of living wage coverage for direct employees or in the supply chain.
- **Recommendation**: Conduct a living wage analysis for the Japanese workforce within the next year and develop a parallel method for supplier wage evaluation.

4.1.2. Supply Chain Social Conditions:

- **Gap**: Limited visibility beyond tier 1 suppliers; minimal quantitative data on social performance.

- **Recommendation**: Implement supplier social assessment program with prioritization of high-risk categories; establish supplier social performance database.

4.1.3. Community Impact Quantification:

- **Gap**: Primarily qualitative reporting on community initiatives without outcome measurement.
- **Recommendation**: Develop quantitative metrics for community program outcomes; implement periodic community perception surveys.

4.1.4. Human Rights Due Diligence:

- **Gap**: Limited systematic human rights risk assessment across value chain.
- **Recommendation**: Conduct comprehensive human rights impact assessment following UN Guiding Principles; establish ongoing monitoring system.

4.1.5. Social Value Measurement:

- **Gap**: No quantification of social value created through products and operations.
- **Recommendation**: Develop social return on investment (SROI) methodology for key initiatives; pilot social impact valuation approach.

4.2. Data Collection Priorities:

Priority	Data Category	Timeframe	Responsible Function
High	Supply chain social indicators	*6-12 months*	Procurement
High	Living wage assessment	*3-6 months*	HR/Compensation
High	Human rights impact assessment	*6-12 months*	Sustainability/Legal
Medium	Community impact metrics	*12-18 months*	CSR/External Affairs
Medium	Product social impact valuation	*12-18 months*	Product Development
Medium	Policy engagement transparency	*6-12 months*	Public Affairs
Low	Extended value chain mapping	*18-24 months*	Sustainability/Supply Chain

4.3. Implementation Approach:

4.3.1. **Phase 1 (0-6 months)**: Develop data collection protocols; assign responsibilities; establish baseline for readily available metrics.

4.3.2. **Phase 2 (6-12 months)**: Implement priority data collection initiatives; pilot new measurement approaches; develop reference scales.

4.3.3. **Phase 3 (12-24 months)**: Expand data collection to address all framework elements; integrate with management systems; automate where possible.

The data availability assessment reveals that while Suzuki has established strong environmental performance measurement, significant investment is needed to build comparable capabilities in social impact measurement, particularly regarding indirect impacts through the value chain and broader societal contributions.

5. SDG MAPPING AND CONTRIBUTION ASSESSMENT

5.1.SDG Materiality for Suzuki

Based on analysis of Suzuki's business model, stakeholder impacts, and strategic priorities, the following SDGs have been identified as most material to the company's operations in Japan:

5.1.1. Primary SDGs *(Highest Materiality):*

i. **SDG 8: Decent Work and Economic Growth**

- Direct alignment with core business of manufacturing and employment.
- Strong potential for positive contribution through quality employment, skills development, and economic multiplier effects.
- Key risks related to labor practices in supply chain.

ii. **SDG 12: Responsible Consumption and Production**

- Central to manufacturing operations and product lifecycle management.
- Significant opportunities for circular economy approaches and resource efficiency.
- Direct connection to Suzuki's environmental management systems.

iii. **SDG 13: Climate Action**

- Material due to carbon emissions from manufacturing and product use.
- Strategic relevance for transition to low-carbon mobility solutions.
- Growing regulatory and stakeholder expectations.

5.1.2. Secondary SDGs (*Moderate Materiality*):

i. **SDG 9: Industry, Innovation and Infrastructure**

- Relevant through R&D activities and infrastructure development.
- Opportunities for contribution through technology innovation.

ii. **SDG 11: Sustainable Cities and Communities**

- Connected to product portfolio and mobility solutions.
- Community impacts near manufacturing facilities.

iii. **SDG 3: Good Health and Well-being**

- Workplace safety and health for employees.
- Product safety for consumers.
- Community health impacts.

iv. **SDG 4: Quality Education**

- Skills development for workforce.
- Educational support in communities.
- Consumer education on sustainable use.

5.1.3. Additional Relevant SDGs:

i. **SDG 5**: Gender Equality (workplace equality and diversity)

ii. **SDG 10**: Reduced Inequalities (inclusive workplace and product access)

iii. **SDG 16**: Peace, Justice and Strong Institutions (governance practices)

iv. **SDG 17**: Partnerships for the Goals (collaboration for sustainability)

For each material SDG, specific targets have been identified that align most closely with Suzuki's activities and impacts. This materiality assessment provides strategic focus for the SLCA framework and helps prioritize impact measurement efforts.

5.2. SDG Contribution Scoring

To enable systematic assessment of Suzuki's contribution to the Sustainable Development Goals, this framework employs a four-tier scoring system for each material SDG:

5.2.1. Level 1: Awareness and Basic Commitment

- Recognition of relevance to business activities.
- Policy commitment to support the goal.
- Basic management attention.
- Limited measurement or systematic action.

5.2.2. Level 2: Systematic Management

- Dedicated programs addressing the goal.
- Structured measurement approach.
- Resource allocation for improvement.
- Integration with operational systems.

5.2.3. Level 3: Demonstrated Improvement

- Quantified positive contribution.
- Measurable progress over time.
- Management of negative impacts.
- Performance above industry average.

5.2.4. Level 4: Transformative Contribution

- Strategic prioritization with executive ownership.
- Innovative approaches that change business model.
- Substantial positive impact at scale.
- Industry leadership and influence.

Based on current available data, Suzuki's preliminary SDG contribution assessment indicates:

SDG	Current Score	Key Strengths	Primary Gaps
SDG 8	Level 2	Employment practices; workplace safety	Supply chain labor conditions; living wage assessment
SDG 12	Level 3	Resource efficiency; recycling programs	Product lifecycle management; circular design
SDG 13	Level 2	Energy efficiency improvements	Science-based targets; product emissions reduction
SDG 9	Level 3	R&D investment; production technology	Open innovation; collaborative development
SDG 11	Level 2	Compact vehicle portfolio; community investment	Urban mobility solutions; systematic community impact
SDG 3	Level 2	Workplace safety programs; product safety	Community health impacts; wellness promotion
SDG 4	Level 2	Employee training programs; educational support	Systematic skill development for future; community education

The SDG contribution scoring system provides a basis for tracking improvement over time and benchmarking against industry peers. The framework recommends annual reassessment of scores based on updated performance data.

6. IMPLEMENTATION PLAN

6.1. Data Collection Protocols

To operationalize this SLCA framework, structured data collection protocols are essential for ensuring consistency, reliability, and comparability. The following protocols are recommended for implementation:

6.1.1. Data Collection Frequency and Timing

Data Category	Collection Frequency	Reporting Period	Verification Approach
Worker indicators	Quarterly/Annually	Fiscal year	Internal audit with sample external verification
Community indicators	Annually	Calendar year	Community validation process
Supplier indicators	Annually with quarterly updates	Fiscal year	Supplier self-assessment with audit verification
Consumer indicators	Quarterly	Rolling 12 months	Quality assurance review
Society indicators	Annually	Calendar year	Third-party review of methodology

6.1.2. Data Collection Methods

- **Quantitative Data**:
  - ✓ HR information system extraction.
  - ✓ Supplier assessment questionnaires.
  - ✓ Customer satisfaction surveys.
  - ✓ Environmental monitoring systems.
  - ✓ Financial reporting systems.
- **Qualitative Data**:
  - ✓ Structured stakeholder interviews.
  - ✓ Focus group discussions.
  - ✓ Grievance mechanism records.
  - ✓ Policy implementation reviews.
  - ✓ Case studies and narrative reports.

6.1.3. Data Quality Assurance

- **Validation Process**: Multi-level review from data provider to functional manager to sustainability team.
- **Consistency Checks**: Comparison with historical data and identification of significant variations.
- **Triangulation**: Cross-verification through multiple sources where feasible.
- **External Verification**: Independent review of high-priority indicators on a rotating basis.

6.2. Roles and Responsibilities

Function	Primary Data Responsibility
Human Resources	Worker-related indicators
External Affairs	Community impact indicators
Procurement	Supplier social performance
Quality Assurance	Product safety and consumer indicators
Environmental Management	Environmental stewardship metrics
Sustainability Team	Coordination and integration
Executive Committee	Review and strategic direction

6.3. Technology Platform

The implementation framework recommends development of an integrated sustainability data management system that:

- Automates data collection where possible.
- Provides real-time dashboards for key indicators.
- Enables drill-down analysis by location and impact category.
- Supports documentation of calculation methodologies.
- Maintains audit trails for verification.

6.4. Stakeholder Engagement Plan

Effective implementation of this SLCA framework requires structured engagement with diverse stakeholders to validate methodologies, gather input, and communicate results. The following stakeholder engagement approach is recommended:

6.4.1. Stakeholder Mapping and Prioritization

Stakeholder Group	Engagement Priority	Key Interests	Engagement Methods
Employees/Unions	High	Working conditions; skills development	Works council consultation; surveys; focus groups
Local communities	High	Environmental impacts; community development	Community advisory panels; public meetings
Suppliers	High	Fair business practices; capability building	Supplier forums; individual consultations
Customers	Medium	Product safety; transparency	Customer surveys; focus groups
Investors	Medium	Risk management; long-term value	ESG briefings; reporting
Civil society	Medium	Human rights; environmental performance	NGO dialogues; multi-stakeholder forums
Industry associations	Low	Sector standards; collective action	Working groups; best practice sharing
Government	Low	Regulatory compliance; policy development	Formal consultations; reporting

6.4.2. Engagement Process

- **Planning Phase**: Methodology development consultation (3-6 months).
- **Implementation Phase**: Regular progress updates and feedback channels.
- **Reporting Phase**: Pre-publication review and input on findings.
- **Improvement Phase**: Collaborative action planning based on results.

7. RECOMMENDATIONS

7.1. Short-term Actions (0-12 months)

i. Establish Governance Structure.
ii. Implement Priority Data Collection.
iii. Enhance Supply Chain Due Diligence.
iv. Strengthen Community Engagement.
v. Integrate SDG Assessment.

7.2. Medium-term Strategy (1-3 years)

i. Expand Measurement Scope.
ii. Build Management Systems.
iii. Enhance External Engagement.
iv. Improve Transparency.
v. Build Internal Capacity.

7.3. Long-term Vision (3-5 years)

i. Integrate Social Value into Business Model.
ii. Achieve Advanced SDG Contribution.
iii. Extend to Global Operations.
iv. Build Industry Influence.
v. Achieve Strategic Integration.
vi. Establish social sustainability as competitive differentiator.

The implementation of these recommendations will enable Suzuki to progressively enhance its social impact management capabilities, moving from basic compliance and risk management toward strategic value creation and industry leadership. The phased approach recognizes resource constraints while prioritizing actions that address critical gaps and build essential foundations for more advanced practices.

8. CONCLUSION

This Social Life Cycle Assessment Framework provides Suzuki Motor Corporation with a comprehensive methodology for understanding, measuring, and enhancing its social impacts across Japanese operations. By systematically addressing impacts on workers, communities, value chain actors, consumers, and society and connecting these impacts to the Sustainable Development Goals the framework enables more strategic management of social sustainability. The assessment reveals that while Suzuki has established strong foundations in areas such as environmental management, product quality, and workplace safety, significant opportunities exist to enhance social impact measurement and management, particularly regarding:

1. Supply chain social conditions and human rights due diligence
2. Community impact quantification and structured engagement
3. Social value creation through products and business models
4. Strategic contribution to sustainable development priorities

The current data availability assessment indicates that approximately 45% of required social indicators are currently accessible through existing systems, with the greatest gaps in supply chain social data, living wage assessment, and social impact valuation. The proposed implementation approach addresses these gaps through a phased strategy that builds capacity while prioritizing areas of greatest risk and opportunity. By implementing this framework, Suzuki can realize several strategic benefits:

- **Enhanced Risk Management**: More systematic identification and mitigation of social risks across operations and value chain
- **Stakeholder Trust**: Strengthened relationships through transparent communication and responsive engagement
- **Employee Engagement**: Increased workforce motivation through demonstration of purpose and values
- **Innovation Opportunities**: Identification of social needs that can drive product and business model innovation
- **Strategic Differentiation**: Leadership position in sector social sustainability performance
- **Contribution to Society**: Measurable positive impact on sustainable development priorities in Japan and globally

As the automotive industry undergoes transformation through electrification, automation, and new mobility models, social sustainability will become increasingly important to business success. This framework positions Suzuki to navigate this transformation responsibly while creating shared value for all stakeholders.
