SUSTAINABILITY ANALYSIS REPORT

PREPARED BY

ANASUA MUKHOPADHYAY

MADHVI SHARMA

ANSHUMAN SINGH

ACKNOWLEDGEMENT

We would like to express our sincere gratitude to everyone who supported and guided us throughout the successful completion of this report. We are deeply thankful to Teams Reservoir, Lagoon and Ocean for their guidance, critical insights and continuous encouragement during all stages of our work.

We are thankful to Praveen Bhargava Sir for his words of wisdom and constant motivation throughout our time here.

We extend our heartfelt gratitude to Kushal Bhargava Sir, for his mentorship and for giving us the opportunity to present this report. His vision is what motivated us to work on this.

Our special thanks to Deepika ma'am, Pranav sir, Aadarsh sir, Mukul sir, Deepak sir, Amit sir, Anshul sir, Ritu ma'am, Sachin Singhal sir, Shagun sir, and Arif sir for their kind cooperation, valuable data insights, and support. Their contribution has been essential in shaping the depth and direction of our analysis.

This report has been a collaborative learning journey, and we are indebted to everyone who made this possible. We thank everyone for making our time here filled with learnings, experiences and growth.

We look forward to staying connected in the future, not just with the organization, but also with everyone here at Perfact Group.

Thank You!

Anasua Mukhopadhyay

Madhvi Sharma

1. INTRODUCTION

This report focusses on the Sustainability Analysis of Perfact Group guided by the European Sustainability Reporting Standards (ESRS) framework. The analysis is structured around the three ESG pillars and corresponding topics mandated by ESRS. For each topic we have selected Key Performance Indicators (KPIs) that are material to a consultancy business with a nationwide footprint and a rapidly expanding digital service portfolio.

- **Environment**- Quantification of the direct and indirect climate impacts of our service delivery model through Scope 1, Scope 2 and Scope 3 greenhouse-gas inventories, complemented by a Water & Waste analysis.
- **Social**- Recognising that advisory quality is inseparable from human capital, the performance was assessed focussing on Access to Communication, Labour Management, Privacy & Data Security, and Human Capital development. These KPIs test the inclusivity, safety and resilience of our workplace as well as the trust we build with clients and communities.
- **Governance**- Sound governance underpins our licence to operate. In this section the Business Ethics codes, Ownership transparency and Pay structure in the administrative set up have been examined.

Perfact Group is India's premier environmental solutions provider with over 20 years of expertise in Environmental Impact Assessment (EIA), Environmental Clearnace, Environmental Compliance, and Lab services. Founded in 2004 by Praveen and Rachna Bhargav, the organization has evolved from a focused environmental consultancy into a comprehensive environmental solutions powerhouse.

The company specializes in science-driven sustainable innovations through research-backed solutions developed in partnership with leading institutions. Perfact Group offers end-to-end environmental services including laboratory testing with full accreditation, regulatory compliance and audits through diversified entities. Their core mission centers on creating exceptional teams working toward planetary betterment through sustainable methodologies.

Key distinguishing factors include being among the first 10 firms in India to receive NABET/MoEF accreditation for Environmental Impact Assessments and their 2016 influence on MOEF&CC policy making compliance more industry friendly. The organization serves critical sectors including thermal power plants, religious tourism development, and projects of national importance while integrating climate action.

Perfact Group's vision is "to become the premier environmental firm for continual and sustainable development with uncompromising eco-centric values," positioning them as a leader in reshaping sustainability practices across industries through comprehensive pollution control solutions and regulatory expertise.

WHY DOES THIS REPORT MATTER?

The 1987 UN Brundtland Commission, states: “Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs”. Sustainability encompasses a broad spectrum, from climate protection and resource conservation to social justice and economic resilience. Achieving sustainability requires balancing these three dimensions so that improvements in one area do not undermine the others

As Perfact Group prepares for the future, analysing their current performance and trends in their operations becomes essential. Quantifying carbon emissions, assessing social impacts and reporting Governance practices puts things into perspective while making it easier for the administrators to make the right strategies, moving ahead.This report aims to communicate our analysis of operations based on ESG principles opening up the avenues of upscaling and being investment ready for the future. Perfact Group

OBJECTIVES

1. To analyse the current performance of the firm based on ESG pillars and Sustainability principles.
2. To estimate the Environmental footprint, Social impacts and Governance practices of the firm.
3. To identify gaps and opportunities for improving operational efficiency.

2. REVIEW OF LITERATURE

2.1. ACADEMIC LITERATURE

2.1.1. Burbano, V.C., Delmas, M.A., & Cobo, M.J. (2024). The Past and Future of Corporate Sustainability Research.

This comprehensive review examines the evolution of corporate sustainability research in management literature, highlighting a critical gap between theoretical research and practical environmental solutions. The authors emphasize that despite significant growth in sustainability research, environmental challenges like climate change persist, underscoring the need for more effective implementation strategies. The paper provides a roadmap for future research directions in corporate sustainability, focusing particularly on bridging the theory-practice divide. This research is particularly relevant for environmental consultancy firms as it identifies key areas where consulting services can effectively bridge theoretical knowledge and practical environmental solutions, positioning consultants as crucial intermediaries in translating research into actionable corporate strategies.

2.1.2. Rahi, A.F. (2024). Corporate sustainability and financial performance: A hybrid literature review.

This study conducts a hybrid literature review to examine the relationship between corporate sustainability practices and financial performance, contributing to the ongoing "does it pay to be green" debate. The research explores the conditions under which sustainability initiatives lead to positive financial outcomes, revealing that timing, implementation context, and organizational factors significantly influence the success of sustainability programs. For environmental consultancy firms, this research provides evidence-based insights for advising clients on sustainable office practices that deliver both environmental and financial benefits, strengthening the business case for sustainability investments.

2.1.3. Aibar-Guzmán, B. (2024). Corporate governance and financial performance: Reframing their relationship in the context of climate change.

This research reframes the relationship between corporate governance and financial performance specifically within the context of climate change challenges. The study addresses how companies can reconcile long-term environmental goals with short-term financial interests, a critical consideration for sustainable office practices. The paper provides frameworks for governance structures that support climate-conscious decision-making, offering highly relevant guidance for environmental consultancy firms on structuring sustainability initiatives within corporate governance frameworks.

2.1.4. Yang, B. & Park, S.D. (2023). Corporate Sustainability: The Impact of Environmental, Social, and Governance Performance on Corporate Development and Innovation.

This study examines how Environmental, Social, and Governance (ESG) performance impacts corporate development and innovation capabilities. The research demonstrates that companies with strong ESG practices tend to have better innovation outcomes and long-term development prospects, providing empirical evidence for the business case of sustainability initiatives in corporate environments. For environmental consultancy firms, this research supports the argument that sustainable office practices not only reduce environmental impact but also enhance innovation capacity and competitive advantage, making sustainability a strategic business imperative rather than merely a compliance requirement.

2.2. INDUSTRY REPORTS AND PRACTITIONER INSIGHTS

2.2.1. ERM (2024). Sustainability Report 2024.

As the largest global pure-play sustainability consultancy, ERM provides valuable insights into current sustainability challenges and solutions facing businesses. The report highlights the increasing urgency of climate change, nature loss, and social inequity challenges that businesses must address. It emphasizes the need for integrated approaches to sustainability that address environmental, social, and economic factors simultaneously. The report provides practical frameworks for implementing sustainability strategies in corporate environments, making it highly relevant for environmental consultancy firms seeking to understand industry best practices and evolving client needs in the sustainability consulting market.

2.2.2. Global Growth Insights (2024). Top Sustainability Consulting Companies Report.

This market analysis reveals that the sustainability consulting market was valued at $9.35 billion in 2023 and is projected to reach $13.33 billion by 2030, with a compound annual growth rate of 5.2%. The report identifies key trends driving demand for sustainability consulting services, including regulatory requirements, stakeholder pressure, and competitive advantages. It highlights the growing importance of sustainability integration in corporate operations and decision-making processes, providing valuable information for environmental consultancy firms to understand market opportunities and position their services effectively in this expanding market.

2.2.3. Office RnD (2024). Transform Your Office: The Essential Blueprint for Building a Sustainable Workplace.

This practical guide focuses specifically on sustainable workplace practices and their implementation in corporate offices. The report emphasizes that sustainable workplaces encourage socially, environmentally, and economically responsible behavior while reducing carbon footprints and operational costs. It provides concrete strategies for energy efficiency, waste

reduction, and employee engagement in sustainability initiatives. The guide is particularly relevant for environmental consultancy firms advising clients on office sustainability, as it offers actionable recommendations that can be directly implemented in corporate settings.

2.2.4. **Yarooms (2024). Sustainable Office Space: Strategies for a Greener Workplace.** This comprehensive guide outlines specific strategies for creating sustainable office environments, focusing on energy-efficient lighting, advanced climate control systems, and renewable energy integration. The report demonstrates how sustainable office practices lead to significant cost savings through reduced energy consumption while providing detailed implementation frameworks for various sustainability initiatives, from basic energy conservation to advanced green technology integration. This resource is valuable for environmental consultancy firms as it offers practical tools and methodologies for helping clients implement sustainable office practices effectively.

3. METHODOLOGY

3.1. SCOPE OF STUDY

3.1.1. Administrative Scope

Total employees currently working from Paschim Vihar Office (DEL/HO).

Total Population: 115 (65 women and 50 men)

Population categories:

i. Senior Management

ii. Team Managers

iii. Executives and Associates

iv. Support Staff

3.1.2. Organizational Scope

The study encompasses all operational activities of Perfact Group of Environmental Solutions, including:

i. Environmental Impact Assessment (EIA) services

ii. Environmental Clearance (EC) consultation

iii. Laboratory testing services

iv. Environmental consultancy operations

v. Administrative and support functions

3.1.3. Temporal Scope

The analysis covers a 1-month period June' 2025.

3.1.4. Geographic Scope

The study includes all facilities and operations under Perfact Group's direct operational control, encompassing:

i. Head Office

ii. Laboratory facilities

iii. Business travel

3.2. APPROACH

I. Industry reports and Academic papers were referred to prepare a plan of action and understand the underlying principles.

II. A Review of Literature was done to validate the plan and objectives of the report. This section has been divided into literatures from Academics and Industry to better communicate the background study behind the work.

III. Industry standards and frameworks were assessed for choosing the methodology for the analysis. The ESRS framework aligned with the objectives of our analysis was thus selected.

IV. An analytical framework was developed based on ESRS Guidelines where different topics were selected for each of the pillars, Environment, Social and Governance. The topics were defined for communicating their context in this report followed by their respective KPI's.

Environment:

i. *Scope 1 Emissions,*
ii. *Scope 2 Emissions,*
iii. *Scope 3 Emissions, and*
iv. *Water & Waste.*

Social:

i. *Access to Communication,*
ii. *Privacy & Data Security,*
iii. *Labour Management, and*
iv. *Human Capital.*

Governance:

i. *Business Ethics,*
ii. *Ownership, and*
iii. *Executive Pay.*

V. Based on the framework, a data requirement sheet was prepared and communicated to the administration. The framework was examined, and data sources were communicated pertaining to each topic.

VI. Respective data sources were followed up on and data was collected based on degree of information , clarity and utility offered.

VII. All the three pillars have been analysed using different methodologies.

Environment pillar included the quantitative analysis and visualisation of data pertaining to the scopes of greenhouse gas emissions, water usage and waste generated.

Social pillar was analysed based on the policies in place pertaining to access to communication, data security, labour management and human capital. To begin with, all the policies were compiled and analysed for their relevance to the selected topics. These policies were then comprehensively read and summarised based on their effective dates, validity periods, key objectives and reviewing authorities. Each of the policies were analysed based on their performance according to the selected topics. The analysis included aspect of alignment, technical details, coverage and impact/effectiveness.

Governance pillar was analysed based on the practices and culture pertaining to business ethics, ownership and executive pay. The administrative set-up was comprehensively studied along with the pay band matrix. The practices and structures were critically analysed based on their performance according to the selected topics. Based on these findings, key strengths and opportunities for improvement were identified.

VIII. Based on the complete analysis of the operations of Perfact Group, a final section of recommendations was formulated. These were conceptualised based on the requirements and gaps noticed during our tenure as Interns.

3.3. COMPONENTS

Table 1. Analytical framework

ENVIRONMENT			
Topics	**Context**	**Data Used**	**Data Source**
Scope 1 Emissions	Direct greenhouse gas emissions from sources owned/controlled by the organization (Fugitive emissions & emissions from PNG)	Appliance details (Brand, model, Refrigerant type, floor wise data), and PNG bill.	Office Maintenance Team
Scope 2 Emissions	Indirect greenhouse gas emissions from the generation of purchased electricity.	Electricity Bill	
Scope 3 Emissions	All other indirect greenhouse gas emissions that occur in the organization's value chain, including site visits and meetings.	Vehicle lineup, Vehicle Usage, Vehicle maintenance details, and Fuel consumption.	Fleet Team
Water and Waste	Resource management covering water consumption efficiency and waste generation practices that impact environmental sustainability & operational costs.	Water usage and Waste generated (Total, floor wise, etc.)	Sustainability Team

SOCIAL			
Topics	**Context**	**Data Used**	**Data Source**
Access to communication	Internal communication infrastructure that ensures transparent information flow and employee engagement across all organizational levels.	Offical channels of communication and usage details.	Administration
Privacy and Data Security	Protection of sensitive information and maintenance of cybersecurity protocols to safeguard both company and client data from breaches.	Internal security breaches/data theft, Data security protocols & systems, and Client confidentiality policies.	Administration
Labour Management	Human resource practices governing employee relations, workplace policies, and systematic approaches to hiring, retention, and conflict resolution.	HR Policies, Employee codes and protocols, and Grievance adressal mechanism.	Intranet (HR Policies)
Human Capital	Workforce composition and diversity metrics that reflect the organization's commitment to inclusive employment and equal representation.	Total workplace population, and Gender diversity & representation.	Administration
		Gender Specific policies and/or SOP's	Intranet (HR Policies)
		DEI policy	Administration

GOVERNANCE			
Topics	**Context**	**Data Used**	**Data Source**
Business Ethics	Organizational transparency and integrity measures including fraud prevention, risk management, and anti-competitive practice policies that ensure ethical business conduct.	Organizational chart showing executive hierarchy and reporting structure List of executive positions, titles, and job descriptions Ownership structure (major shareholders)	Administration
Ownership	Organisational ownership and administrative set-up, analysed across the hierarchy of power, strauctures and responsibilities.		Intranet (Copy of Councils)
Executive Pay	Senior management compensation frameworks analysed based on overall pay-band matrix for all employees.	Pay Band Matrix	Intranet (TADA Policy-Annexure)

3.4. EMISSION CALCULATION

3.4.1. Calculation Framework

Emissions are calculated using the following formula:

Activity Data × Emission Factor = CO_2 Equivalent Emissions

3.4.2. Emission Factors

PNG: IPCC 2006 Guidelines emission factors

Gas	Emission Factor	Global Warming Potential (GWP)
CO_2	2.0 kg CO_2 /SCM	1
CH_4	0.00004 kg CH_4/SCM	25
N_2O	0.0000004 kg N_2O /SCM	298

Refrigerants: IPCC 2006 Guidelines emission factors

0.15 kgCO_2 / year

Electricity: Central Electricity Authority (CEA) CO_2 Baseline Database

0.727 kg CO_2/kWh (2023-24 weighted average).

Fuel combustion: World Resources Institute. (2015).

India-specific road transport emission factors.

2.272 kg CO_2/L

3.5. LIMITATIONS AND ASSUMPTIONS

- Incomplete historical data for certain emission sources
- Estimation required for some activity data
- Limited availability of facility-specific emission factors
- Potential measurement uncertainties in utility data

4. ENVIRONMENT

4.1. SCOPE 1 EMISSIONS

Scope 1 emissions are direct greenhouse gas emissions from sources that are owned or controlled by your company.

4.1.1. Stationary combustion of Natural gas (PNG):

Natural gas consumption from your premises falls under Scope 1 as:

- Direct Combustion: When you burn natural gas for heating, cooking, or other operations, CO2, CH4, and N2O are directly released into the atmosphere
- Company Control: You have operational control over when and how much gas is consumed.
- On-site Emissions: The emissions occur at your business location.
- GHG Protocol Classification: According to the GHG Protocol, the stationary combustion of fossil fuels is a classic Scope 1 source.

Table 2. Gas Consumption Data

Period	Days	Consumption (SCM)	Daily Average (SCM/day)
09.01.2025 - 15.03.2025	65 days	28.100	0.432

Emission calculation formula

i. **Step 1:** Calculate CO_2 Emissions

CO_2Emissions = Consumption × CO_2Emission Factor

ii. **Step 2**: Calculate CH_4 Emissions (CO_2equivalent)

CH_4 Emissions = Consumption × CH_4 Factor × GWP

iii. **Step 3**: Calculate N_2O Emissions (CO_2 equivalent)

N_2O Emissions = Consumption × N_2O Factor × GWP

iv. **Step 4:** Total Emissions for This Period

Total CO2e = CO_2 + CH_4 + N_2O (in CO_2equivalent)

Table 3. Emission Summary

Consumption (SCM)	CO_2e Emissions (kg)	CO_2e Emissions (tonnes)
28.100	56.231	0.056

Based on the current consumption pattern:

- **Average daily consumption**: 0.433 SCM/day
- **Annual consumption estimate**: 0.433 × 365 = 158.05 SCM/year
- **Annual CO2e emissions**: 158.05 × 2.0003 = **0.316 tonnes CO_2e /year**

4.1.2. Fugitive Emissions from AC units

This section calculates the greenhouse gas (GHG) emissions from the fugitive emissions of air conditioning units at the office facility.

Fugitive emissions are unintentional releases of greenhouse gases that escape into the atmosphere from equipment, processes, or systems without passing through a designed exhaust point. In the context of air conditioning systems, fugitive emissions occur when refrigerant gas slowly leaks from AC units through:

- Seals, joints, and connection points
- Natural wear and tear of equipment components
- Temperature and pressure cycling during normal operation
- Microscopic imperfections in system components

Table 4. Equipment Inventory

Window AC Units	6
Split AC Units	27
Total	33 units

Tonnage Distribution		Brand Distribution	
Tonnage	**No. of Units**	**Brand**	**No. of Units**
1 T	8	Voltas	26
1.25 T	2	Croma	3
1.5 T	21	Lloyd	5
2 T	2	Sharp	1
Refrigerant		R32	
GWP		675 CO_2 -eq *(IPCC AR6)*	
Refrigerant Charge per Ton			
1 T		1.2 kg	
1.25 T		1.5 kg	
1.5 T		1.8 kg	
2 T		2.4 kg	

<u>Emission calculation formula</u>

Total Emissions = Installation Emissions + Operating Emissions + Disposal Emissions

We haven't accounted for Installation and Disposal emissions as both lie beyond our scope of study and time horizon. Thus, Operating Emissions become our total fugitive emissions here.

$$\textbf{Operating Emissions} = C \times (x/100) \times T$$

Where,

C: Refrigerant capacity of equipment

x: Annual leak rate (% of capacity)

T: Time in years (assumed 1 year for this calculation)

Table 5. Equipment Inventory by Floor

Floor	Window Units	Split Units	Total Units	Total Capacity (Tons)
Ground Floor	0	1	1	1.5
1st Floor	0	7	7	10.5
2nd Floor	2	6	8	10.5
3rd Floor	1	5	6	8.25
4th Floor	3	2	5	6.0
Total	**6**	**27**	**33**	**36.75**

Table 6. Refrigerant Charge Calculation

Tonnage	Units	Refrigerant per Unit (kg)	Total Refrigerant (kg)
1 Ton	8	1.2	9.6
1.25 Ton	2	1.5	3.0
1.5 Ton	21	1.8	37.8
2 Ton	2	2.4	4.8
Total	33	-	55.2 kg

- **Daily Leak Rate**: 15% / 365 days = 0.04110% per day
- **Daily Operating Emissions**: 55.2 × 0.0004110 = 0.02269 kg R32/day
- **Daily Refrigerant Emissions**: 0.02269 kg R32/day
- **Daily CO_2-eq Emissions**: 0.02269 × 675 = 15.32 kg CO_2-eq/day
- **Daily Emissions**: 0.0153 tCO_2-eq/day
- **Total Refrigerant Charge**: 55.2 kg
- **Annual Leak Rate**: 15% (IPCC default)

- **Operating Emissions**: 55.2 × 0.15 = 8.28 kg R32/year
- **Total Annual Refrigerant Emissions**: 8.28 kg R32/year
- **CO_2 Equivalent Emissions**: 8.28 kg × 675 GWP = 5,589 kg CO_2-eq/year
- **Total Emissions**: 5.59 tCO_2-eq/year

4.1.3. Fugitive emissions from Refrigerators

This section provides fugitive emissions calculations for four laboratory refrigerators operating 24/7.

Table 7. Refrigerator inventory and specifications

Brand	Type	Electricity Consumption (kWh/year)	Storage Volume (L)	Estimated Refrigerant	Refrigerant Charge (kg)*
Samsung	Frost Free	261	302	R600a	0.080
Croma	Frost Free	205	235	R600a	0.070
LG	Not specified	1,927.2	581	R600a	0.120
Haier	Frost Free	291	386	R600a	0.090
Refrigerant			R600a (Isobutane)		
GWP			3 (IPCC AR6 values)		
Operating Hours			8,760 hours/year (24/7 operation)		
Emission Factor			15% (IPCC)		

Emission calculation formula

Fugitive Emissions = Σ (Equipment Count × Refrigerant Charge × Emission Factor × GWP)

I. **Samsung (302L)**

Refrigerant Charge: 0.080 kg R600a

Annual Leakage: 0.080 × 0.15 = 0.012 kg/year

CO_2e Emissions: 0.012 × 3 = 0.036 kg CO_2e/year

II. **Croma (235L)**

Refrigerant Charge: 0.070 kg R600a

Annual Leakage: 0.070 × 0.15 = 0.0105 kg/year

CO_2e Emissions: 0.0105 × 3 = 0.0315 kg CO_2e/year

III. **LG (581L)**

Refrigerant Charge: 0.120 kg R600a

Annual Leakage: 0.120 × 0.15 = 0.018 kg/year

CO_2e Emissions: 0.018 × 3 = 0.054 kg CO_2e/year

IV. **Haier (386L)**

Refrigerant Charge: 0.090 kg R600a

Annual Leakage: 0.090 × 0.15 = 0.0135 kg/year

CO_2e Emissions: 0.0135 × 3 = 0.0405 kg CO_2e/year

Total Annual Fugitive Emissions= 0.162 kg CO_2e/year

Table 9. Efficiency Analysis

Refrigerator	Energy Efficiency (kWh/L/year)	Emission Intensity (kg CO_2e/L/year)
Samsung	0.864	0.708
Croma	0.872	0.715
LG	3.317	2.720
Haier	0.754	0.618

Based on the efficiency analysis data, there are notable variations in both energy consumption and environmental impact across different brands. Haier demonstrates the best overall performance with the lowest energy efficiency rating of 0.754 kWh/L/year and the smallest emission intensity of 0.618 kg CO_2e/L/year, making it the most environmentally friendly option among the four brands examined. Samsung and Croma show similar moderate performance levels, with Samsung consuming 0.864 kWh/L/year and emitting 0.708 kg CO_2e/L/year, while Croma uses 0.872 kWh/L/year and produces 0.715 kg CO_2e/L/year. LG stands out as significantly less efficient, consuming 3.317 kWh/L/year, nearly four times more energy than the other brands, and generating correspondingly higher emissions of 2.720 kg CO_2e/L/year.

4.2. SCOPE 2 EMISSIONS

Scope 2 emissions are indirect greenhouse gas emissions from purchased electricity, steam, heating, and cooling consumed by an organization. These emissions occur at power generation facilities, not at the point of consumption, but are attributed to the purchasing organization.

Electricity Consumption Analysis (28th May-27th June' 25*)*

- Normal Units: 5,549 kWh
- Off-Peak Units: 1,164 kWh

- Peak Units: 2,941 kWh
- Total Monthly Consumption: 9,654 kWh

Emission calculation formula

Scope 2 Emissions = Electricity Consumption (kWh) × Grid Emission Factor (kg CO_2/kWh)

Table 10. Emissions from Electricity purchase

Period	Units (kWh)	CO_2 Emissions (kg)	CO_2 Emissions (tonnes)	Cumulative (kWh)
Nov' 24	48	34.896	0.035	48
Dec' 24	252	183.204	0.183	300
Jan' 25	1,102	801.154	0.801	1,402
Feb' 25	1,502	1,091.954	1.092	2,904
March' 25	4,350	3,162.45	3.162	7,254
April' 25	8,218	5,974.486	5.974	15,472
May' 25	9,654	7,018.458	7.018	25,126
Total 7-Month Emissions			**18.27 T**	

Annual projection

Projection Methodology Based on 7-month consumption data (Nov' 24-May' 25), annual Scope 2 emissions are projected using seasonal adjustment methodology accounting for:

i. **Summer cooling loads** (July-September): Peak consumption periods

ii. **Moderate consumption** (October-November): Transitional weather

iii. **Business growth stabilization**: Recent 17% monthly growth rate

- **Projected Annual Consumption**: **72,626 kWh**
- **Projected Annual Scope 2 Emissions**: **52.78 tonnes CO_2**

4.3. SCOPE 3 EMISSIONS

Scope 3 emissions are indirect greenhouse gas emissions that occur in your company's value chain but are not owned or directly controlled by your company.

Table 11. Vehicle use categorization

S.No.	Categories	Subcategories	Av. Distance (km)
1	*Office Work*	Meetings, Travel, Bank work, etc.	12.00
2	*Site Work*	Dust audit, client meetings, site visit, etc.	33.78
3	*Monitoring and Testing*	Calibration, monitoring, sample collection, etc.	22.71
4	*Miscellaneous*	Events, Head office visit, etc.	14.96

Table 12. Vehicle lineup

S.No.	Vehicle	Fuel Type	Mileage (km/l)
1	*Maruti Suzuki Ciaz*	Petrol	12.03
2	*Hyundai Aura*	Petrol	12
3	*Maruti Suzuki XL6*	Petrol (Hybrid)	11.28

Emission calculation formula

- Fuel Consumed (L) = Distance (km) ÷ Mileage (km/L)
- CO_2 Emissions (kg) = Fuel Consumed (L) × 2.272 kg CO_2/L

Table 13. Category wise emission analysis

Category	Total Trips	Total Distance (km)	Fuel Consumed (L)	CO_2 Emissions (kg)	Emissions Per Trip (kg)
Monitoring & Testing	16	363.41	30.34	68.93	4.31
Site Work	9	260.45	21.74	49.39	5.49
Miscellaneous	7	104.70	8.75	19.88	2.84
Office Work	5	60.00	5.01	11.38	2.28
TOTAL	**37**	**788.56**	**62.07**	**140.90**	**3.81**

Chart 1. Emission Distribution w.r.t. categories

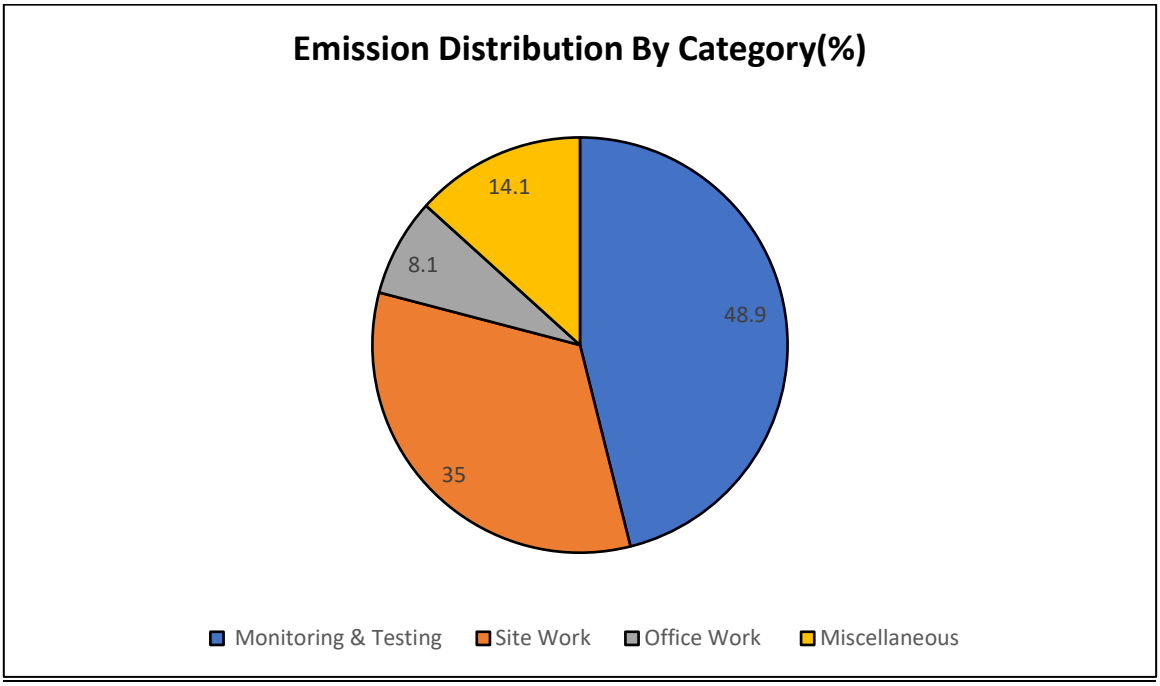

Table 14. Vehicle-wise emissions analysis

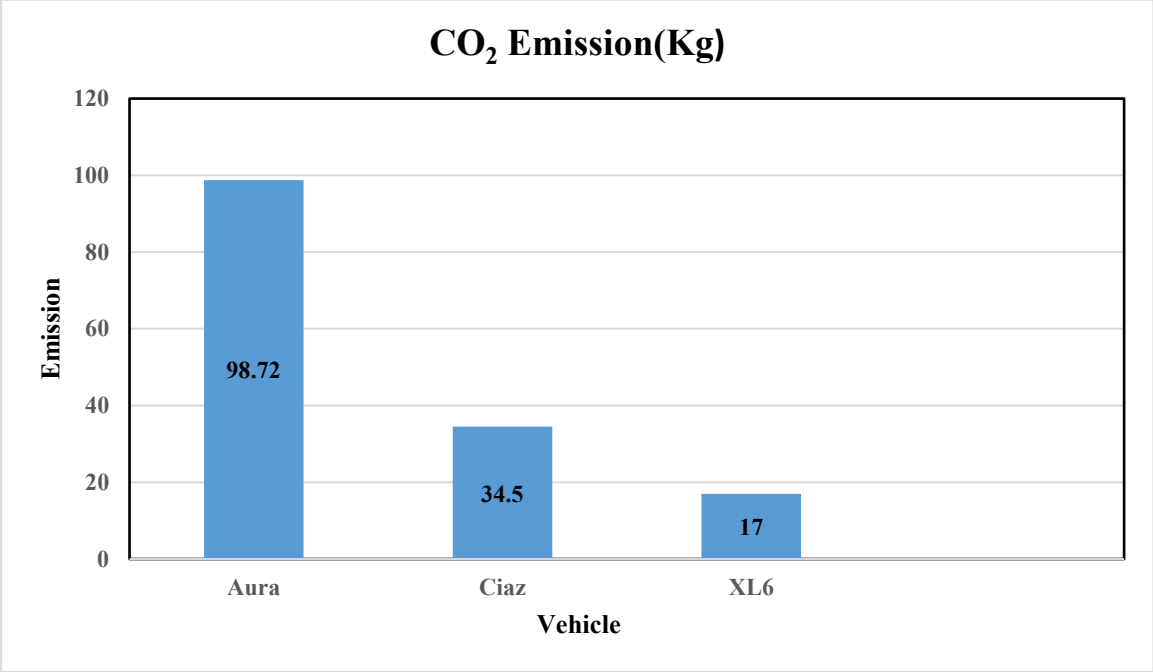
Vehicle	Mileage (km/l)	Total trips	Total distance (km)	Fuel consumed (l)	CO_2 emissions (kg)	% of total emissions	Efficiency rank
Hyundai Aura	12.00	22	521.38	43.45	98.72	70.0%	2nd
Maruti Suzuki Ciaz	12.03	10	182.79	15.19	34.51	24.5%	1st (Most Efficient)
Maruti Suzuki XL6	11.28	5	84.39	7.48	17.00	12.1%	3rd (Least Efficient)
TOTAL	**-**	**37**	**788.56**	**62.07**	**140.90**	**100.0%**	**-**

Annual Emissions: 1690.8 kg CO_2 = 1.69 tonnes CO_2

Chart 2. Vehicle specific CO2 emissions



Vehicle Efficiency Ranking

i. Maruti Suzuki Ciaz: 12.03 km/L (Most Efficient - 0.1888 kg CO_2/km)

ii. Hyundai Aura: 12.00 km/L (Moderate - 0.1893 kg CO_2/km)

iii. Maruti Suzuki XL6: 11.28 km/L (Least Efficient - 0.2015 kg CO_2/km)

Critical Findings

- Hyundai Aura dominates emissions with 70.0% of total CO_2 (98.72 kg) despite moderate efficiency.
- Most efficient vehicle (Ciaz) handles only 24.5% of emissions, indicating underutilization.
- **Total monthly fuel consumption**: 62.07 liters producing 140.90 kg CO_2

4.4. WATER & WASTE

4.4.1. Water usage analysis

Calculation Method

- Total Monthly Usage = Final Reading - Initial Reading
- Daily Usage = Current Day Reading - Previous Day Reading
- Usage Rate = Total Usage / Number of Days

Calculations

- **Initial Reading** (June 6th): 590 kL
- **Final Reading** (June 30th): 662 kL
- **Total Monthly Usage**: 662 - 590 = 72 kL
- **Daily Average**: 72 / 24 days = 3.0 kLD
- **Monthly Usage Period**: June 6-30 (24 days of recorded data)

Data Analysis and Trends

Table 15. Daily usage pattern

Date Range	Daily Usage (kL)	Trend
June 6-10	0.6-3.0	Increasing
June 11-15	2.0-4.0	Peak usage
June 16-20	3.0-4.0	Sustained high
June 21-25	1.0-3.0	Declining
June 26-30	1.0-3.0	Stabilizing

4.4.2. Waste generated

Overall Wastage Distribution

- **Total Wastage**: 71.69 kg over 17 days
- **Daily Average**: 4.22 kg per day

Table 16. Floor-wise Total wastage

Floor	Waste Generated (kg)	% representation
1st Floor	4.00 kg	5.6%
2nd Floor	24.18 kg	33.7
3rd Floor	24.13 kg	33.7
4th Floor	19.38 kg	27.0

Temporal Patterns

- **Peak Wastage Days**: June 16-20, 2025 (averaging 5.8 kg/day)
- **Zero Wastage Days**: June 21-22 and June 29 (weekends/holidays)
- **Reduced Activity Period**: June 23-26 (post-weekend recovery)
- **Recent Trend**: Increasing wastage in the final days of June and early July.

Floor-specific Consumption Characteristics

- **1st Floor**: Significantly lower wastage (94% less than other floors), with activity primarily in the final days.
- **2nd & 3rd Floors**: Nearly identical patterns (24.18 vs 24.13 kg), suggesting similar activities/occupancy.
- **4th Floor**: Moderate wastage levels, consistently active throughout the period.

5. SOCIAL

This section presents the social sustainability performance of Perfact Environmental Solutions in accordance with ESRS framework's perspective, reporting on impacts on people and how social issues create financial risks and opportunities for the company. Our assessment covers four critical topics: Access to Communication, Privacy and Data Security, Labour Management, and Human Capital, aligned with ESRS's "General Requirements" and essential disclosure requirements.

5.1. ACCESS TO COMMUNICATION

Social capital refers to the actual and potential resources embedded within and derived from the network of relationships possessed by individuals, making effective communication systems essential for organizational sustainability.

Table 17. Communication Infrastructure Analysis

Aspect	Details	Coverage	ESRS Alignment
Official Channels	Mail, Chat, Intranet	100% employee access	S1-1: Own workforce
Platform Diversity	Email, Google Chat, Google Meet	Multi-modal communication	S4-1: Consumers and end-users
Active Users	All 115 employees	Universal participation	S1-2: Working conditions
Representation	All employee categories	Inclusive communication	S1-5: Adequate wages

5.1.1. Communication Governance Framework

Policy Implementation

- **Structured Communication Hierarchy**: M1+ band employees authorized for client communication
- **Quality Assurance**: Draft review system for junior employees

- **Recording Requirements**: Google Meet sessions recorded for transparency
- **External Communication**: Centralized through Info ID for regulatory bodies

Key Findings

- 100% employee access to communication platforms demonstrates strong social capital development.
- Multi-channel approach ensures accessibility across diverse workforce.
- Hierarchical approval system maintains professional standards while supporting junior staff development.

5.2. PRIVACY AND DATA SECURITY

Sustainable human resource management influences employee loyalty and retention through mediated social capital, with data security being fundamental to employee trust.

Table 18. Data Security Infrastructure

Security Component	Implementation	Coverage	Impact Measure
Primary Platform	Google Workspace	Enterprise-level	Zero breaches recorded
Network Security	Firewalls, Proxy blockers	Full organizational coverage	100% data protection
IT Protocols	Strict enforcement	All employee levels	Complete compliance
Client Confidentiality	Integrated protection policies	All client interactions	Trust maintenance

5.2.1. Privacy Protection Measures

Zero Breach Record

- No instances of internal security breaches
- No data theft incidents recorded
- Proactive security protocol enforcement

Compliance Framework

- Google Workspace enterprise security standards
- Multi-layered protection systems
- Regular security protocol updates

Employee Privacy Rights

- Secure handling of personal information
- Confidential HR data management
- Privacy-by-design approach in all systems

5.3. LABOUR MANAGEMENT

Table 19. Comprehensive Policy Overview

Policy Area	Document	Key Provisions	Accessibility	Review Cycle
Hybrid Work Transition	Circular No. 2	Full-time office mandate from April 2025	Intranet available	2 years validity
Code of Conduct	Ethics Framework	Integrity, communication, resource use	Intranet available	Continuous
Travel & Allowances	TADA Policy	Band-wise compensation structure	Intranet available	Annual review
Leave Management	Leave Policy	12 CL + 15 EL + CCL, COVID provisions	HRIS Portal	Annual review
Dress Code	Dress Code Policy	Gender-specific guidelines, cultural sensitivity	Intranet available	As needed
Shift Timings	Circular No. 3	Standardized work hours across roles	Intranet available	2 years validity
Attendance System	Circular No. 1	Biometric tracking, regularization process	GreytHR System	2 years validity
Hiring Processes	HR Policies	Recruitment and selection guidelines	Intranet available	As needed
Layoff Procedures	HR Policies	Structured termination processes	Intranet available	As needed
Grievance Mechanism	Multi-tier System	3-level escalation with 72-hour response	Intranet available	Ongoing

5.3.1. Labour Management Effectiveness

Comprehensive Work-Life Balance Framework

- **Leave Entitlements**: 12 Casual Leaves + 15 Earned Leaves + Compensatory Casual Leaves (CCL)
- **COVID-19 Response**: Additional 15 special leaves for affected employees without account deduction
- **Mandatory Work-Life Balance**: 4 Earned Leaves compulsory annually for employee well-being
- **Flexible Leave Usage**: CL available in full/half days, EL accumulation up to 45 days.

Standardized Work Environment

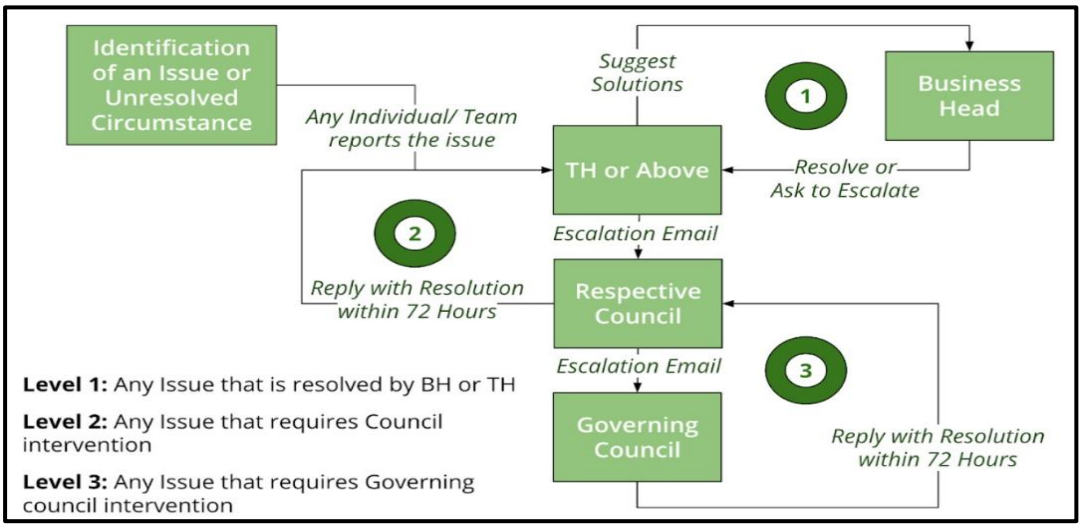
- **Shift Timing Structure**:
    - **General Employees**: 9:30 AM to 6:00 PM
    - **Support Staff**: 9:00 AM to 6:30 PM
    - **Security Guards**: 12-hour shifts
- **Attendance Management**: Dual tracking system (biometric + manual sign-in)
- **Regularization Process**: 3-day window for attendance corrections, maximum of 1 request per week

5.3.2. Cultural Sensitivity and Inclusion:

- **Dress Code Policy**: Gender-specific guidelines accommodating cultural preferences
- **Special Provisions**: Pink attire allowance for newlywed female employees
- **Seasonal Adaptations**: Comprehensive winter wear guidelines
- **Professional Standards**: Balanced formal/casual wear schedule (Wed/Sat are considered for casual days)

5.3.3. Grievance Mechanism:

Perfact Group has established a structured 3-tier Grievance Redressal System ensuring systematic resolution of employee concerns and workplace issues.



Grievance Redressal Mechanism

Table 20. Overview of the mechanism

Grievance Level	Authority	Resolution Timeframe	Escalation Criteria	Resolution Scope
Level 1	Business Head (BH) or Team Head (TH)	Within 72 hours	Issue resolved at managerial level	Direct supervisor resolution
Level 2	Respective Council (Internal Affairs)	Within 72 hours	Council intervention required	Policy interpretation, inter-departmental issues
Level 3	Governing Council	Within 72 hours	Governance-level decision required	Strategic decisions, policy violations

Grievance Process Flow

I. **Issue Identification**: Any individual or team reports concerns through official channels.
II. **Initial Assessment**: Team Head or above evaluates and suggests solutions.
III. **Resolution or Escalation**: 72-hour response requirement with clear resolution or escalation pathway.
IV. **Council Review**: Structured escalation to appropriate council level based on issue complexity.
V. **Final Resolution**: Governing Council intervention for firm-level matters.

Key Features

- **Universal Access**: All 115 employees can initiate grievance process
- **Structured Timeline**: Maximum 72-hour response commitment at each level
- **Clear Escalation Path**: Defined criteria for moving between levels
- **Multiple Entry Points**: Issues can be reported to any Team Head or above
- **Documentation**: Formal email-based escalation and resolution tracking
- **Transparency**: Clear communication of resolution decisions

Structure

- **RACI Matrix Implementation**: Clear responsibility, accountability, consultation, and information flow across all policies
- **Multi-level Review**:

  Team Heads → HR & Accounts → Internal Affairs Council → Governing Council
- **Employee Feedback**: Formal mechanisms with monthly assessments and structured consultation processes
- **Grievance Integration**: Seamless connection between routine feedback and formal grievance processes

5.4. HUMAN CAPITAL

Human capital refers to the knowledge, skills, and abilities possessed by individual employees, forming the foundation of organizational sustainability.

Table 21. Overview of Human Capital

Metric	Current Status	Overview	Sustainability Impact
Total Workforce	115 employees	100%	Stable employment base
Gender Diversity	65 women, 50 men	57% female, 43% male	Strong female representation
Organizational Levels	L/L1 to V band	7 hierarchical levels	Clear career progression
Geographic Distribution	Multi-location presence	Various regional offices	Distributed talent access

5.4.1. Gender Equity Analysis

Representation Strengths

- 57% female workforce exceeds industry averages
- Gender-specific support policies implemented
- Non-discriminatory framework established

Table 22. Comprehensive Gender-Specific Policies

Policy Area	Description	Target Group	Impact	Implementation
Menstrual WFH	Work-from-home flexibility	Female employees	Health and comfort support	Ongoing basis
Dress Code Accommodation	Cultural and personal preference flexibility	All employees	Inclusive workplace culture	Color-coded schedule
Special Occasion Recognition	Pink attire allowance for newlywed employees	Female employees	Cultural celebration support	Individual basis
Safety Protocols	Enhanced safety measures and transportation	Female employees	Workplace security	After 7:30 PM provisions
Maternity Support	14-month transition period with hybrid work	New mothers	Work-life balance	Structured phases
Professional Flexibility	Casual wear days (Wednesday/Saturday)	All employees	Comfort and expression	Weekly schedule

5.4.2. Work-Life Balance Initiatives:

- **Leave Flexibility**: Different leave types accommodating various personal needs
- **Cultural Sensitivity**: Dress code policies recognizing diverse cultural backgrounds
- **Family Support**: Extended maternity provisions and emergency accommodation
- **Health Considerations**: Menstrual leave and medical emergency provisions

5.4.3. Career Development Framework

- Clear progression pathways across all departments
- Department-specific career tracks (Admin, EIA/NOC, Lab, F&A)
- Skills-based advancement opportunities

5.5. POLICY SUMMARY TABLES

Table 23. Policy Overview

Policy Document	Effective Date	Validity Period	Key Objectives	Review Authority
Attendance Regularization	February 17, 2025	2 years	Transparent attendance tracking, compliance	Governing Council
Office Shift Timings	February 17, 2025	2 years	Standardization, operational efficiency	Governing Council
Hybrid Policy	February 17, 2025	2 years	Cultural alignment, productivity enhancement	Governing Council
Leave Policy	Ongoing	Annual review	Work-life balance, employee well-being	HR Department
Dress Code Policy	Ongoing	As needed	Professional standards, cultural inclusion	HR Department
Code of Conduct	Ongoing	Continuous	Ethical standards, professional conduct	Internal Affairs
TADA Policy	December 15, 2020	Annual review	Fair compensation, travel management	Finance & Accounts

Table 24. Work- life Balance Matrix

Leave Type	Entitlement	Eligibility	Key Features	Carry Forward
Casual Leave (CL)	12 days annually	All employees (1/month)	Full/half day usage, max 3 consecutive	Converts to EL if >5 balance
Earned Leave (EL)	15 days annually	Confirmed employees (post 1 year)	Full day only, 4 mandatories annually	Up to 45 days accumulation
Compensatory Casual Leave (CCL)	Based on extra hours	All employees	Earned through overtime/field work	Max 10 days accumulation
COVID Special Leave	15 days	All affected employees	No deduction from regular balance	Emergency provision

Table 25. Implementation Timeline Summary

Phase	Duration	Activities	Responsible Authority
Phase 1	Until Feb 28, 2025	Communication and Awareness	All departments
Phase 2	Until Mar 1, 2025	Review and Consultation	Internal Affairs Council
Phase 3	From Apr 1, 2025	Full Implementation	Governing Council

5.6. PERFORMANCE ANALYSIS

5.6.1. Current Performance Summary

Strengths Identified

- Universal access to communication platforms (100% coverage)
- Zero data security breaches
- Strong gender diversity (57% female workforce)
- Comprehensive policy framework with intranet and HRIS accessibility
- Multi-level governance structure with clear RACI responsibilities
- Robust work-life balance provisions (27+ leave days annually + CCL)
- Cultural sensitivity in dress code and workplace policies
- COVID-19 responsive leave policies demonstrating organizational agility
- Standardized work schedules enhancing operational efficiency
- Transparent attendance and regularization systems

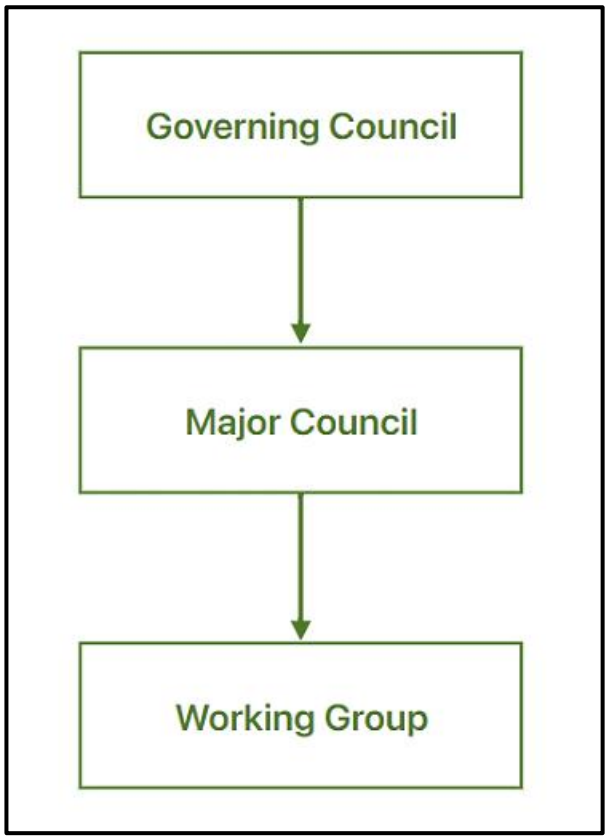
Policy Integration Achievements

- **Digital Integration**: GreytHR system for leave applications and attendance tracking
- **Flexible Work Arrangements**: Multiple leave types accommodating diverse employee needs
- **Cultural Accommodation**: Gender-specific and culturally sensitive dress code policies
- **Health and Safety**: Enhanced provisions for female employees and emergency situations
- **Professional Development**: Clear progression pathways with standardized work environments
- **Grievance Resolution**: Structured 3-tier system with 72-hour response guarantee across all levels.

6. GOVERNANCE

The Governance structure operates through a **3-tier hierarchical framework** with clear reporting relationships and defined responsibilities.

At the apex is the ***Governing Council***, which functions as the decision-making body that acts upon recommendations received from the various Councils within the organization.



The ***Major Councils*** serve as the steering bodies positioned between the Governing Council and operational units i.e. Working groups. It holds responsibility for assigned portfolios and provides recommendations to the Governing Council for decision-making purposes.

At the operational level, ***Working Groups*** represent smaller bodies comprising up to 5 members. These groups are created under the direction of a Major Council and operate with responsibility for executing specific mandates.

This structure establishes a clear chain of command flowing from the Governing Council through the Major Council down to the Working Groups, ensuring systematic governance and accountability throughout the administrative hierarchy.

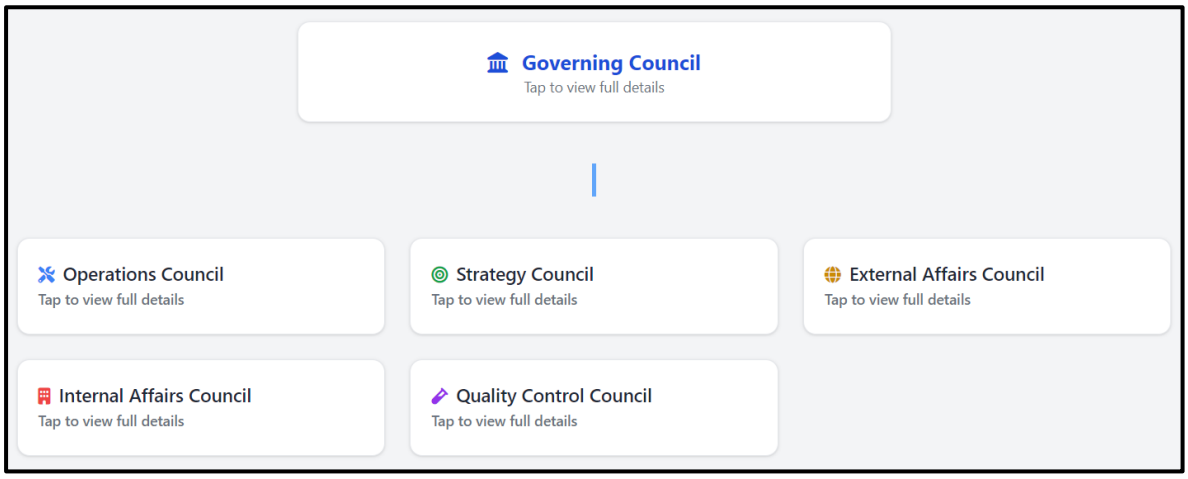
The **Council structure** operates through a **2-tiered governance framework** consisting of Major Councils and Working Groups.

Major Councils serve as the primary governing bodies, each comprising 5 members who function as recommendation bodies for their assigned portfolios. These councils hold responsibility and accountability for recommending policy changes, taking administrative action, and designating working groups to complete specific objectives and achieve key results.

Working Groups represent a smaller organizational unit created under the direction of a Council with a specific mandate. These groups are accountable for a designated portfolio and report directly to the Council that established them. Each Working Group consists of up to 5 individuals led by a Working Group Leader, who bears responsibility for the governance and achievements of the group. This structure enables focused execution of specific mandates while maintaining clear reporting lines and accountability to the overseeing Major Council. Working Groups comprise 3-5 members with defined roles and tenure limits:

- **Team Leader (TH+):** Responsible for team building, workload coordination, and serving as primary contact person
- **Team Members (Any level):** Attend meetings, complete objectives, and take minutes

6.1. COUNCILS AND WORKING GROUPS



6.1.1. Governing council

The **Governing Council's** responsibilities encompass comprehensive oversight and strategic direction of council operations. Key responsibilities include overseeing and improving working processes and procedures to enhance efficiency and effectiveness in Council Work, conducting reviews of outputs from all Councils and their targets, and maintaining responsibility for top-level communication and decision-making processes.

The council is tasked with implementing changes in response to feedback from Councils, approving and releasing final versions of Circulars issued by Councils, and suggesting improvements and new activities to Councils while determining appropriate scope changes as necessary. Additional responsibilities include suggesting modifications to Council composition structure or personnel and reviewing MIS dashboards, performance management through KPI and KRA analysis, financial forecasts, and new business opportunities.

6.1.2. Operations Council

The **Operations Council** oversees operational efficiency through process improvement, documentation, and team output reviews. Key responsibilities include meeting customer requirements, managing accreditation body communications, and recommending new work areas to the Strategy Council.

The council implements changes based on feedback from External Affairs Council, Quality Team, customers, and competitive reviews. It also suggests improvements to IT infrastructure, hardware, software, printing and courier services, as well as modifications to team composition and structure to optimize operational performance.

The **Operations Council** operates through five specialized Working Groups, each with defined leadership and specific operational mandates:

i. **Work Priority Working Group** focuses on work order reviews, team alignment with targets, task allocation, project prioritization, workload management across FAEs and experts, and conducting fortnightly meetings and monthly meetings with TH.

ii. **Accreditation Working Group** manages clear communication with EC, experts and auditors, surveillance activities, NABET compliance and assessment processes, MoU termination/dissociation with experts, and maintaining accreditation cycles with certificate updates.

iii. **Document Workflow Working Group** handles stationery record keeping and ordering, printer upkeep and maintenance, cartridge management, courier dispatch and tracking, library record keeping, printing work, and pen drive data uploading.

iv. **IT Working Group** maintains records in Wunderlist and Excel, provides repair and maintenance services, employee coordination support with VCC, complaint handling, SIM issue management, internet and networking support, UPS and inverter maintenance, hotspot maintenance, mouse requirement records, and IT asset management.

v. **Safety Working Group** ensures accurate daily attendance and leave records, maintains first aid kits, manages fire safety, chemical safety, safety drills, office material and building security, and daily office closure procedures.

6.1.3. Strategy Council

The **Strategy Council** manages strategic planning and business development functions. Core responsibilities include designing MIS dashboards, performance management through KPI and KRA systems, financial forecasting, and identifying new business opportunities.

The council handles financial planning, budget management and finalization, and employee value proposition development including policies and grievances. It approves strategic decisions for firm accreditation, certifications, and collaborations while assigning priorities based on PESTEL factors.

Additional responsibilities encompass employee recruitment, deboarding, onboarding and training processes, decisions on external trainings and conference attendance, networking activities, and management of marketing strategy, activities, and digital presence.

The Strategy Council operates through five specialized Working Groups with defined responsibilities:

i. **Marketing Working Group** manages guidelines, newsletter production, and LinkedIn activities.

ii. **HR Strategy Working Group** oversees hiring processes, job description creation, job posting, aptitude testing, negotiations, onboarding, offboarding, and full and final settlements.

iii. **Culture & Development Working Group** handles 360 feedback, professional growth fostering, psychometric analysis, teamwork analysis, Glad-Sad-Mad surveys, incentives, productivity and competency assessment, training gap assessment, training identification, and training evaluation.

iv. **Academia Collaborations Working Group** manages overall event and MOU planning and coordinates academic collaborations with DTU for M.Tech and Ph.D programmes.

v. **Green Initiatives Working Group** monitors daily consumption and waste data, daily energy consumption, daily water consumption, and daily vehicle fuel consumption.

6.1.4. External Affairs Council

The **External Affairs Council** manages project financials and external stakeholder relationships. Key responsibilities include creating project-level budgets, overseeing project costs, evaluating project profitability, and improving costing models.

The council maintains positive customer relationships by recording, evaluating and reporting on customer feedback, lost projects, and market competitiveness aspects. It serves as the primary liaison with regulatory bodies including MoEF&CC, SEIAA, SEAC and PCBs, acting as the designated point of contact for these organizations.

Additional responsibilities include reviewing MOUs and collaborations with experts, organizations, vendors, technology partners, and sub-contractors to support the firm's external partnerships and compliance requirements.

The External Affairs Council operates through three specialized Working Groups with defined responsibilities:

i. **Business Development Working Group** handles client feedback and project loss analysis, competitor and market intelligence, strategic evaluation and benchmarking, reporting and insight sharing, strategic business development initiatives, and internal collaboration.

ii. **Customer Relationship Working Group** focuses on understanding and knowing customers, strengthening communication, effective issue resolution, ensuring consistent and satisfying service, and relationship development and networking.

iii. **Business Associates Working Group** manages review of MOUs and collaborations with business associates, professional services providers (QRA, LCA etc) and institutes.

6.1.5. Internal Affairs Council

The **Internal Affairs Council** manages internal operations and financial administration. Key responsibilities include maintaining project-level expense records, managing travel, transportation and logistical activities, and handling staff leave reimbursements, TA/DA and payroll processes.

The council oversees internal communication and team changes, provides day-to-day accounting, procurement and cash management services, and manages tax compliance, book building and CA audits. Additional responsibilities include creating and managing budgets for IT, infrastructure, vehicles, travel, transport and other assets, as well as completing Annual Rate Contracts (ARCs) with vendors.

The Internal Affairs Council operates through six specialized Working Groups:

i. **Tours Working Group** manages travel bookings, hotel reservations, ground transportation, team communications, record keeping, and reimbursement processing.

ii. **Budget Working Group** handles cost optimization, approval and compliance control, expense monitoring, departmental coordination, and monthly budget preparation.

iii. **Grievance Working Group** provides conflict resolution through discussion facilitation, resolution processes, follow-up, exceptional case handling, and fair concern resolution platforms.

iv. **Payroll Working Group** administers taxes, incentive payouts, attendance monitoring, leave management, compensation processing, and salary computations.

v. **Office Maintenance Working Group** oversees facility cleaning, routine maintenance, kitchen inventory, HVAC systems, asset management, repairs, and contractor services.

vi. **Fleet Working Group** coordinates vehicle lineup, movement monitoring, service records, maintenance, vendor relations, fuel compliance, manpower planning, and metro card administration.

6.1.6. Quality Control Council

The **Quality Control Council** ensures document quality and process improvement across the organization. Core responsibilities include enhancing document management processes, maintaining information accuracy, and upholding the highest quality standards.

The council reviews documents submitted to external parties, manages document templates, corrections and updates, and approves new document formats. It identifies training needs for quality improvement both externally and internally, while working on continual improvement of quality management processes.

6.2. REVIEW MECHANISM

The governance structure includes four key review mechanisms:

I. Councils meet at least twice monthly with weekly Working Group meetings, supplemented by active chat and email engagement.

II. Quarterly targets are reviewed quarterly to assess progress.

III. Chairs and Conveners submit progress forms every six months for Governing Council review against annual targets.

IV. Annual Board of Directors Review meetings with the Governance Council evaluate Council outcomes, composition, and target achievement.

6.3. KEY PERFORMANCE INDICATORS

The governance structure is assessed through six key performance indicators:

i. **Decision Making**- Number of tasks completed from start to end in a quarter (each KRA will have multiple objectives)

ii. **Turn-Around-Time**- The average time taken from an issue being reported to the resolution being sent via email

iii. **MoM Publication**- Minutes of Meeting should be sent to Governing Council every week on time

iv. **Reviews Held**- Meetings held and attended by majority of members in a quarter

v. **Recommendations**- Number of recommendations sent to Governing Council

vi. **Publishing of Monthly Objectives of Council with % Achieved as per Annual Targets**- Percentage achievement tracking against annual targets

6.4. PAY BAND STRUCTURE ANALYSIS

Perfact group operates a hierarchical pay band structure across four functional divisions: Admin/General, EIA/NOC, LAB, and F&A. The structure comprises eight distinct bands:

i. **Band V (Senior Leadership)**: Senior VP positions across all four divisions, with VP-level roles as secondary tier

ii. **Band M3**: General Manager positions across all divisions

iii. **Band M2**: Deputy General Manager positions across all divisions

iv. **Band M1**: Assistant General Manager and Manager positions across all divisions, with Assistant Manager roles

v. **Band E/T (Executive/Technical)**: Senior Executive, Executive, and Junior Executive positions, with specialized roles like Senior Analyst, Analyst, Junior Analyst, Technical Assistant, and Accountant

vi. **Band T**: Trainee positions across all divisions

vii. **Band L2**: Senior Support Staff (Admin/General only)

viii. **Band L/L1/G**: Guards and Support Staff (Admin/General only)

Each division maintains parallel hierarchical structures with function-specific designations.

6.4.1. Executive Pay Analysis - ESRS Framework Alignment

Under ESRS governance requirements, the pay structure demonstrates:

i. **Transparency**: Clear hierarchical bands with defined executive tiers (V, M3, M2, M1) suggest structured compensation governance.

ii. **Executive Compensation Governance**: The multi-tiered executive structure (Senior VP to Assistant General Manager) indicates established pay ratios and governance oversight mechanisms.

iii. **Board Oversight**: The distinct senior leadership band (V) with Senior VP roles suggests board-level compensation decisions for top executives.

6.4.2. Critical Analysis

Strengths

- Structured hierarchy supports transparent compensation governance.
- Cross-functional consistency demonstrates systematic approach to pay equity.
- Clear progression pathways align with ESG best practices for employee development.

Gaps

- **Pay Ratio Disclosure**: No indication of pay multiples between executive and median worker compensation, limiting stakeholder transparency.
- **Performance Linkage**: Structure shows bands but not performance-based compensation criteria, potentially missing ESG performance integration.
- **Diversity Considerations**: Band structure doesn't indicate diversity targets or inclusive promotion pathways within executive ranks.

Table 26. Key Strengths & Opportunities

Governance Dimension	Key Strengths	Opportunities
Administrative Structure	Hierarchical council system, Clear accountability chains, Systematic issue resolution	External engagement, Performance monitoring, etc.
Working Group Performance	Comprehensive KPI framework, Regular review cycles, Clear tenure limits	Diversity metrics, Innovation measurement, etc.
Business Ethics	Formal code of conduct, Training programs, Reporting mechanisms	Public metrics, External validation, etc.
Ownership Transparency	Clear shareholder agreements, Minority protections, etc.	Public disclosure, Diversity targets, etc.

7. WHAT CAN BE CHANGED?

- Creation of real time dashboard for monitoring changes in consumption pattern promoting Sustainable Consumption.
- Maintaining the databases for environmental footprint, easing the process of tracking down the scope 1, 2 and 3 emissions.
- Accelerating the transition of petroleum-based cars to hybrid cars to electric cars to minimize the negative environmental impact.
- Segregation of waste in dry and wet waste in colour coded bins for evaluating the waste generation and reduction.
- Recycling waste water back into the system (except the water used in lab) to reduce water footprint.
- Introducing solar as renewable energy source as backup energy supply.
  Setting up rainwater harvesting system for water supply in non-potable utilization.
- Enhanced feedback mechanism utilization rates for effective policy implementation.
- Increasing female representation among executives for un-biased and equal decision making.
- Conducting training or sessions on sustainable consumption and practices to create awareness among the employees.
- Integration of sustainable practices in the organization policy for better regulation.

8. CONCLUSION

This comprehensive Sustainability Analysis of Perfact Group, conducted using the European Sustainability Reporting Standards (ESRS) framework across 115 employees, reveals strong sustainability fundamentals with exceptional social performance and robust governance structures, while identifying critical environmental improvement opportunities. The organization demonstrates a total annual carbon footprint of 54.85 tonnes CO_2 equivalent, dominated by Scope 2 electricity emissions (96.2%), alongside exemplary social sustainability performance including 100% communication accessibility, zero data security breaches, 57% female representation exceeding industry standards, and comprehensive work-life balance policies with 27+ annual leave days supported by a 72-hour grievance response system. The sophisticated 3-tier governance framework comprising the Governing Council, five Major Councils, and 23 specialized Working Groups ensures systematic decision-making and accountability, while the 8-band pay structure across four functional divisions provides transparent compensation governance. Priority recommendations include implementing real-time consumption dashboards, transitioning to renewable energy sources, establishing waste segregation systems, and increasing female executive representation. With its 20+ years of environmental consulting expertise, demonstrated internal sustainability practices, and investment-ready fundamentals, Perfact Group is uniquely positioned to serve as both a credible sustainability advisor and a model of sustainable business practices, capable of guiding clients toward planetary betterment through sustainable methodologies while achieving significant environmental improvements through targeted interventions in energy management and operational efficiency.
